For hver skattekrone folkebibliotekene får på landsbasis, får innbyggerne fire ganger så mye tilbake. Dette er Svanhild Aabøs konklusjon i en undersøkelse hvor befolkningen ble spurt om å verdsette bibliotekene. 94 prosent av befolkningen mener det er en demokratisk rettighet å ha et folkebibliotek i kommunen. Dette viser at biblioteket har en verdi både for dem som bruker det, og for dem som ikke selv er bibliotekbrukere. I denne avhandlingen presenterer forfatteren resultatene av denne undersøkelsen. Engelsk tekst. 270 s. 2005. Forhåndsomtale.

A practical guide to building fully operational financial cash flow models for structured finance transactions Structured finance and securitization deals are becoming more commonplace on Wall Street. Up until now, however, market participants have had to create their own models to analyze these deals, and new entrants have had to learn as they go. Modeling Structured Finance Cash Flows with Microsoft Excel provides readers with the information they need to build a cash flow model for structured finance and securitization deals. Financial professional Keith Allman explains individual functions and formulas, while also explaining the theory behind the spreadsheets. Each chapter begins with a discussion of theory, followed by a section called "Model Builder," in which Allman translates the theory into functions and formulas. In addition, the companion website features all of the modeling exercises, as well as a final version of the model that is created in the text. Note: Companion website and other supplementary materials are not included as part of eBook file.

This book provides a much-needed accessible and non-technical account of a highly topical issue - European Monetary Union. It is a coherent and authoritative statement of the view of the Commission of the European Communities by its chief economist. The book has already been written about in the Financial Times, and it should attract much media attention on publication.

As the fastest growing source of energy in the world, wind has a very important role to play in the global energy mix. This text covers a spectrum of leading edge topics critical to the rapidly evolving wind power industry. The reader is introduced to the fundamentals of wind energy aerodynamics; then essential structural, mechanical, and electrical subjects are discussed. The book is composed of three sections that include the Aerodynamics and Environmental Loading of Wind Turbines, Structural and Electromechanical Elements of Wind Power Conversion, and Wind Turbine Control and System Integration. In addition to the fundamental rudiments illustrated, the reader will be exposed to specialized applied and advanced topics including magnetic suspension bearing systems, structural health monitoring, and the optimized integration of wind power into micro and smart grids.

Definitions, Concepts and Scope of Engineering Asset Management, the first volume in this new review series, seeks to minimise ambiguities in the subject matter. The ongoing effort to develop guidelines is shaping the future towards the creation of a body of knowledge for the management of engineered physical assets. Increasingly, industry practitioners are looking for strategies and tactics that can be applied to enhance the value-creating capacities of new and installed asset systems. The new knowledge-based economy paradigm provides imperatives to combine various disciplines, knowledge areas and skills for effective engineering asset management. This volume

comprises selected papers from the 1st, 2nd, and 3rd World Congresses on Engineering Asset Management, which were convened under the auspices of ISEAM in collaboration with a number of organisations, including CIEAM Australia, Asset Management Council Australia, BINDT UK, and Chinese Academy of Sciences, Beijing University of Chemical Technology, China. Definitions, Concepts and Scope of Engineering Asset Management will be of interest to researchers in engineering, innovation and technology management, as well as to managers, planners and policy-makers in both industry and government.

Monthly Foreign Trade Statistics  
Fundamental and Advanced Topics in Wind Power  
BoD – Books on Demand

This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. This is the standard textbook for courses on probability and statistics, not substantially updated. While helping students to develop their problem-solving skills, the author motivates students with practical applications from various areas of ECE that demonstrate the relevance of probability theory to engineering practice. Included are chapter overviews, summaries, checklists of important terms, annotated references, and a wide selection of fully worked-out real-world examples. In this edition, the Computer Methods sections have been updated and substantially enhanced and new problems have been added. Engineering Asset Management discusses state-of-the-art trends and developments in the emerging field of engineering asset management as presented at the Fourth World Congress on Engineering Asset Management (WCEAM). It is an excellent reference for practitioners, researchers and students in the multidisciplinary field of asset management, covering such topics as asset condition monitoring and intelligent maintenance; asset data warehousing, data mining and fusion; asset performance and level-of-service models; design and life-cycle integrity of physical assets; deterioration and preservation models for assets; education and training in asset management; engineering standards in asset management; fault diagnosis and prognostics; financial analysis methods for physical assets; human dimensions in integrated asset management; information quality management; information systems and knowledge management; intelligent sensors and devices; maintenance strategies in asset management; optimisation decisions in asset management; risk management in asset management; strategic asset management; and sustainability in asset management. Active Prelude to Calculus is designed for college students who aspire to take calculus and who either need to take a course to prepare them for calculus or want to do some additional self-study. Many of the core topics of the course will be familiar to students who have completed high school. At the same time, we take a perspective on every topic that emphasizes how it is important in calculus. This text is written in the spirit of Active Calculus and is especially ideal for students who will eventually study calculus from that text. The reader will find that the text requires them to engage actively with the material, to view topics from multiple perspectives, and to develop deep conceptual understanding of ideas. Many courses at the high school and college level with titles such as "college algebra", "precalculus", and "trigonometry" serve other disciplines and courses other than calculus. As such, these prerequisite classes frequently contain wide-ranging material that, while mathematically interesting and important, isn't necessary for calculus. Perhaps because of these additional topics, certain ideas that

are essential in calculus are under-emphasized or ignored. In Active Prelude to Calculus, one of our top goals is to keep the focus narrow on the following most important ideas. Those most important ideas include: functions as processes; average rate of change; a library of basic functions; families of functions that model important phenomena; the sine and cosine are circular functions; inverses of functions; exact values versus approximate ones; and long-term trends, unbounded behavior, and limits of functions. See more in the preface of the text at <https://activecalculus.org/prelude/preface-our-goals.html>.

The text is available in three different formats: HTML, PDF, and print, each of which is available via links on the landing page at <https://activecalculus.org/>. The first two formats are free.

Active Calculus is different from most existing texts in that: the text is free to read online in .html or via download by users in .pdf format; in the electronic format, graphics are in full color and there are live .html links to java applets; the text is open source, so interested instructor can gain access to the original source files via GitHub; the style of the text requires students to be active learners ... there are very few worked examples in the text, with there instead being 3-4 activities per section that engage students in connecting ideas, solving problems, and developing understanding of key calculus ideas; each section begins with motivating questions, a brief introduction, and a preview activity; each section concludes (in .html) with live WeBWork exercises for immediate feedback, followed by a few challenging problems.

A guide to proper American English word usage, grammar, pronunciation, and style features examples of good and bad usage from the media.

In 1994, the National Space Transportation Policy laid the framework for appropriate government agencies to maintain strong launch systems and infrastructure while modernizing space transportation capabilities and encouraging cost reductions. More than a decade later, through combined Department of Defense (DoD) and industrial investment, the two Evolved Expendable Launch Vehicle (EELV) families of U.S. rockets (Atlas V and Delta IV) have proved to be maturing, reliable state-of-the-art technologies. In 2004, Congress directed the Secretary of Defense to establish a panel of experts with extensive space launch and operations background to address the future National Security Space launch requirements and the means of meeting those requirements. DoD selected RAND to facilitate and support this panel in its deliberations between May 2005 and May 2006. This report analyzes the National Security Space (NSS) Launch Requirements Panel's major findings and recommendations. In short, the Panel concludes that, because basic rocketry principles, use of chemically derived thrust, and multiple expendable stages seem certain to remain the design of choice for operational space launch vehicles, the EELV can satisfy all known and projected NSS requirements through 2020.

High Excitation and Short Pulse Phenomena contains the proceeding of the Third Trieste ICTP-IUPAP Semiconductor Symposium on "High Excitation and Short Pulse Phenomena", held at the International Center for Theoretical Physics, Trieste, Italy on July, 2-6 1984. This book contains the keynote papers of the symposium and the contributions from the participants. It describes the non-equilibrium electron-hole plasmas in direct and indirect gap semiconductors; transport of plasmas and of hot carriers; and expansion velocities. The book also elucidates the screening effects involved in the exc ...

Public Health Policy and Ethics brings together philosophers and practitioners to address the foundations and principles upon which public health policy may be advanced. What is the basis that justifies public health in the first place? Why should individuals be disadvantaged for the sake of the group? How do policy concerns and clinical practice work together and work against each other? Can the boundaries of public health be extended to include social ills that are amenable to group-dynamic solutions? These are some of the crucial questions that form the core of this volume of original essays sure to cause practitioners to engage in a critical re-evaluation of the role of ethics in public health policy. This volume is unique because of its philosophical approach. It develops a theoretical basis for public health and then examines cutting-edge issues of practice that include social and political issues of public health. In this way the book extends the usual purview of public health. Public Health Policy and Ethics is of interest to those working in public health policy, ethics and social philosophy. It may be used as a textbook for courses on public health policy and ethics, medical ethics, social philosophy and applied or public philosophy.

The High/Scope Curriculum is a developmentally based approach to early childhood education. This curriculum's "Extensions" newsletter, in which the articles in this collection first appeared, informs curriculum users about new development, relating to the High/Scope "open framework" curriculum. This collection divides the articles into eight chapters. Chapter 1, "Supportive Adult-Child Interaction," includes articles on encouraging group problem solving, rules and limits, persona dolls as discussion starters, and superhero play. Chapter 2, "Materials and Environments for Active Learners," considers computer use, materials for infants and toddlers, and gardening. Chapter 3, "Learning and Exploring throughout the Daily Routine," presents articles on arrivals and departures for infants and toddlers, reading throughout routines, small group interaction strategies, and pretend play. Chapter 4, "Key Experiences in the Preschool Classroom," contains articles on reading, message boards, promoting outdoor experiences, children's art, dramatic arts, and movement. Chapter 5, "Meeting the Needs of All Children," presents articles on supporting children's home language, classroom adaptations for children with special needs, and High/Scope strategies for specific disabilities. Chapter 6, "Active Learning in the Elementary Grades," focuses on hands-on materials, children's interests, drama, art, and parent-teacher conferences. Chapter 7, "Collaborating with Parents," includes articles on parent involvement opportunities, parent conferences, and involving parents in curriculum planning. Chapter 8, "Team Planning, Assessment, and Staff Development," contains articles on planning around children's interests, assessing program quality through classroom observations, and mentoring. Appended is a list of books and audiovisual material published by the High/Scope Press. (KB)

This book provides an introduction to quantum optics for experimental physicists and for college students who have studied quantum mechanics. Its distinguishing feature is its emphasis on multimode fields with correlating different-frequency modes, notably on their phenomenological description and on the practical methods of generating them. The phenomena described in this book provide an opportunity to study nonrelativistic quantum electrodynamics and to master many important concepts of theoretical physics.

A presentation of seven years' archaeological excavation, research, and analysis of the

site of Cosa

Collection of the monthly climatological reports of the United States by state or region with monthly and annual National summaries.

This book treats the Atiyah-Singer index theorem using the heat equation, which gives a local formula for the index of any elliptic complex. Heat equation methods are also used to discuss Lefschetz fixed point formulas, the Gauss-Bonnet theorem for a manifold with smooth boundary, and the geometrical theorem for a manifold with smooth boundary. The author uses invariance theory to identify the integrand of the index theorem for classical elliptic complexes with the invariants of the heat equation.

*Sex in Advertising: Perspectives on the Erotic Appeal* is the first book to thoroughly tackle important issues about sex in advertising. What is it? Does it work? How does it affect individuals and society? Well-respected scholars and popular writers answer these questions as they address the following issues associated with sex in today's advertising environment: gender differences and representation, unintended social effects, subliminal embeds, appeals to the homosexual community, and new media. The book contains a blend of perspectives, including original experimental studies, interpretive and historical analyses, and cultural critiques. The definitive source on sex in advertising, this book: \*is centralized around a singular theme: Understanding how sex in advertising appeals work and why they are so prevalent; \*includes multiple perspectives to capture the richness of sexual appeals; \*brings together viewpoints from both well-known scholars and writers; \*provides a wealth of ideas and research questions for those interested in the topic; and \*contains discussions of sex in advertising from its roots in the 1700s to online advertising today and beyond. The book is must reading for advertising and gender researchers, scholars, and students. Anyone interested in mass media, consumer psychology, and popular culture will find this book an essential resource.

The textural discussion accompanying this novel examines the thematic and technical elements which make it a literary classic

This collection of essays has two purposes: first to give the advanced student of Amharic a sample of the Amharic writing style and secondly to provide information on Ethiopia's cultural background. The texts were written by several Ethiopian university students some 40 years ago on subjects with which they were most familiar such as naming, christening, wedding, burial ceremony, food and drink, the manner of wearing clothes, house construction in Amhara country, daily work of an Ethiopian woman, landholding disputes, beauty, merchant, mercato, country market, artisans, elderhood, priests, dabtara, monkhood, divination, Christmas, Easter, Addis Ababa, the City of Gondar, Harar City etc. Although some time has passed since the collection was compiled the texts convey a good picture of Ethiopian culture. Each Amharic text is given an English translation on the opposite side. The book is completed by an Amharic-English Dictionary of nearly 90 pages and an index of English words and Amharic lexemes.

The Congressional Record is the official record of the proceedings and debates of the United States Congress. It is published daily when Congress is in session. The Congressional Record began publication in 1873. Debates for sessions prior to 1873 are recorded in *The Debates and Proceedings in the Congress of the United States (1789-1824)*, the *Register of Debates in Congress (1824-1837)*, and the *Congressional Globe (1833-1873)*

Employs numerical techniques, graphs, and flow charts in explanations of methods and formulas for various functions of advanced analysis

A year-long study of the writing development of 27 first through third graders in an English/Spanish bilingual program was conducted during the 1980-81 school year. Samples of

the children's writing were collected at four intervals, coded for computer tallying, and analyzed in terms of code-switching, spelling, punctuation and segmentation, structural features, stylistic devices, and content. Additionally, the context in which the writing developed was evaluated by classroom observations, teacher interviews, review of familial backgrounds, and a survey of the community language situation. Myths about bilingual language proficiency, biliteracy, bilingual education, teaching writing, and learning to write are all countered by evidence presented in this study. In a discussion of implications, the concept of a whole language approach to writing instruction is supported, in which authentic and functional texts are offered to and produced by children. Examples of the children's writing with appropriate translations are given along with various tables. Informal follow-up information is presented in three epilogues dealing with changes in the researcher's commitment to the study's original writing theories, the writing of some students a year after the study; and a chronological outline of the demise of the bilingual program used in the study. Appendices list interview questions used for teachers and aides and categories for coding the writing data. This book contains 134 references. (ALL)
