The New York Times best-selling book exploring the counterproductive reactions white people have when their assumptions about race are challenged, and how these reactions maintain racial inequality. In this “vital, necessary, and beautiful book” (Michael Eric Dyson), antiracist educator Robin DiAngelo deftly illuminates the phenomenon of white fragility and “allows us to understand racism as a practice not restricted to ‘bad people’ (Claudia Rankine). Referring to the defensive moves that white people make when challenged racially, white fragility is characterized by emotions such as anger, fear, and guilt, and by behaviors including argumentation and silence. These behaviors, in turn, function to reinstate white racial equilibrium and prevent any meaningful cross-racial dialogue. In this in-depth exploration, DiAngelo examines how white fragility develops, how it protects racial inequality, and what we can do to engage more constructively.

From the incomparable New York Times and New Yorker illustrator Tamara Shopsin, a debut novel about a NYC printer repair technician who comes of age alongside the Apple computer—featuring original artistic designs by the author. NAMED A MOST ANTICIPATED BOOK OF 2021 BY LIT HUB. *LaserWriter II* is a coming-of-age tale set in the legendary 90s indie NYC Mac repair shop TekServe—a voyage back in time to when the internet was new, when New York City was gritty, and when Apple made off-beat computers for weirdos. Our guide is Claire, a 19-year-old who barely speaks to her bohemian co-workers, but knows when it's time to snap on an antistatic bracelet. Tamara Shopsin brings us a classically New York novel that couldn't feel more timely. Interweaving the history of digital technology with a tale both touchingly human and delightfully technical, Shopsin brings an idiosyncratic cast of characters to life with a light touch, a sharp eye, and an unmistakable voice. Filled with pixelated philosophy and lots of printers, *LaserWriter II* is, at its heart, a parable about an apple.

Identifies the most common computer problems, locates chips in the IBM PC and the Apple IIe, describes performance tests, and reviews techniques for repairing display monitors and disk drives

From buying and selling PC hardware to product development and selling services, this book offers a realistic picture of making it on one's own. The book mixes practical advice and cautions with real-world anecdotes of successes and failures.
