

## Decades Of Science Fiction

Mothership: Tales from Afrofuturism and Beyond is a groundbreaking speculative fiction anthology that showcases the work from some of the most talented writers inside and outside speculative fiction across the globe—including Junot Diaz, Victor LaValle, Lauren Beukes, N. K. Jemisin, Rabih Alameddine, S. P. Somtow, and more. These authors have earned such literary honors as the Pulitzer Prize, the American Book Award, the World Fantasy Award, and the Bram Stoker, among others.

E. Schwab’s genre-defying tour de force. A Life No One Will Remember. A Story You Will Never Forget. France, 1714: in a moment of desperation, a young woman makes a Faustian bargain to live forever—and is cursed to be forgotten by everyone she meets. Thus begins the extraordinary life of Addie LaRue, and a dazzling adventure that will play out across centuries and continents, across history and art, as a young woman learns how far she will go to leave her mark on the world. But everything changes when, after nearly 300 years, Addie stumbles across a young man in a hidden bookstore and he remembers her name. Features the finest science fiction writings from the past two decades of the annual "The Year's Best Science Fiction," including writings from such authors as Greg Bear, Pat Cadigan, Robert Silverberg, and Ursula K. Le Guin.

Brian Aldiss William Gibson R.A. Lafferty Ursula K. Le Guin Lucius Shepard Bruce Sterling Theodore Sturgeon Howard Waldrop Connie Willis Gene Wolfe Roger Zelazny "The best stories are timeless. Long years from now the stories here may still touch someone, cause that person to blink, and put the book down for a second, and stare off through the hallow air, and shirver in wonder."

The History of Science Fiction traces the origin and development of science fiction from Ancient Greece up to the present day. The author is both an academic literary critic and acclaimed creative writer of the genre. Written in lively, accessible prose it is specifically designed to bridge the worlds of academic criticism and SF fandom.

"Upon you and you alone must rest the fate of the universe. You are the only ones to save it." Thus spoke the mysterious Cosmic Engineers to a small group of human beings on the rim of the solar system. Somewhere out there in the vastness of the galaxies lurked the greatest challenge they would ever face - the catastrophic fury of the Hellhounds of Space. Promptly, courageously the earthlings boarded their galactic spaceships and journeyed out far beyond uncharted stars, plunging into dangers too awful even to contemplate.

Landscape and the Science Fiction Imaginary is an original and ambitious exploration of science fiction as a visual cultural discourse. This book argues that a serious account has yet to be given of the key role of the visual in a wider science fiction culture, both in its effects and its potentials. Taking influential historical works of visual art as starting points, along with illustration, movie matte painting, documentary, ‘artist’s impressions’ and digital environments, John Timberlake focuses on the notion of science fiction as an ‘imaginary topos’, which draws principally on the intersection between landscape and historical/prehistorical time. As a genre science fiction has a peculiar ocularity and envisioning that places it at odds with realist fiction, and this book posits the genre as a form of ‘alternate seeing’, a deeply visual and evocative method for understanding the connections between science, history, the pre-human and the non-anthropocentric. Indeed, as the author argues, to begin to account for the excess of science fiction landscape is to examine how we as humans might look afresh, without the comforts of familiarity or complacency. Richly illustrated, this book will appeal to scholars, students and fans of science fiction and the visual culture that surrounds it.

Newly reprinted and redesigned, this special edition is vividly illustrated with images of film posters, magazines, and books. From dime store novels to pulp magazines, science fiction has chronicled both our hopes for the future and our fear of it.. Learn the story-behind-the-story in this monumental volume documenting 100 years of science fiction.

Deeply researched and meticulously documented.

This book is the definitive critical history of science fiction. The 2006 first edition of this work traced the development of the genre from Ancient Greece and the European Reformation through to the end of the 20th century. This new 2nd edition has been revised thoroughly and very significantly expanded. An all-new final chapter discusses 21st-century science fiction, and there is new material in every chapter: a wealth of new readings and original research. The author’s groundbreaking thesis that science fiction is born out of the 17th-century Reformation is here bolstered with a wide range of new supporting material and many hundreds of 17th- and 18th-century science fiction texts, some of which have never been discussed before. The account of 19th-century science fiction has been expanded, and the various chapters tracing the twentieth-century bring in more writing by women, and science fiction in other media including cinema, TV, comics, fan-culture and other modes.

The Abolition of Man, C. S. Lewis's masterpiece in ethics and the philosophy of science, warns of the danger of combining modern moral skepticism with the technological pursuit of human desires. The end result is the final destruction of human nature. From *Brave New World* to *Star Trek*, from steampunk to starships, science fiction film has considered from nearly every conceivable angle the same nexus of

morality, technology, and humanity of which C. S. Lewis wrote. As a result, science fiction film has unintentionally given us stunning depictions of Lewis's terrifying vision of the future. In *Science Fiction Film and the Abolition of Man*, scholars of religion, philosophy, literature, and film explore the connections between sci-fi film and the three parts of Lewis's book: how sci-fi portrays "Men without Chests" incapable of responding properly to moral good, how it teaches the Tao or "The Way," and how it portrays "The Abolition of Man."

A highly practical, step by step guide on setting up and running a mentoring or coaching programme in a Higher Education institution. Chapters cover all aspects of the process from what it means to coach or mentor to recruitment of mentors and coaches, induction, offering supervision, and planning and conducting the evaluation.

"To read their stories felt to me the way I suspect other people feel hearing jazz for the first time," recalls Curtis Sittenfeld of her initial encounter with the Best American Short Stories series. "They were windows into emotions I had and hadn't had, into other settings and circumstances and observations and relationships." Decades later, Sittenfeld was met by the same feeling selecting the stories for this year's edition. The result is a striking and nuanced collection, bringing to life awkward college students, disgraced public figures, raunchy grandparents, and mystical godmothers. To read these stories is to experience the transporting joys of discovery and affirmation, and to realize that story writing in America continues to flourish. THE BEST AMERICAN SHORT STORIES 2020 INCLUDES T. C. BOYLE • EMMA CLINE • MARY GAITSKILL ANDREA LEE • ELIZABETH McCracken • ALEJANDRO PUYANA WILLIAM PEI SHIH • KEVIN WILSON and others

NATIONAL BOOK AWARD FINALIST • NATIONAL BESTSELLER • An audacious, darkly glittering novel set in the eerie days of civilization's collapse—the spellbinding story of a Hollywood star, his would-be savior, and a nomadic group of actors roaming the scattered outposts of the Great Lakes region, risking everything for art and humanity. Now an original series on HBO Max. Kirsten Raymonde will never forget the night Arthur Leander, the famous Hollywood actor, had a heart attack on stage during a production of *King Lear*. That was the night when a devastating flu pandemic arrived in the city, and within weeks, civilization as we know it came to an end. Twenty years later, Kirsten moves between the settlements of the altered world with a small troupe of actors and musicians. They call themselves The Traveling Symphony, and they have dedicated themselves to keeping the remnants of art and humanity alive. But when they arrive in St. Deborah by the Water, they encounter a violent prophet who will threaten the tiny band's existence. And as the story takes off, moving back and forth in time, and vividly depicting life before and after the pandemic, the strange twist of fate that connects them all will be revealed. Look for Emily St. John Mandel's new novel, *Sea of Tranquility*, coming in April 2022!

A Hugo Award-winning author and music journalist explores the weird and wild story of when rock 'n' roll met the sci-fi world of the 1970s As the 1960s drew to a close, and mankind trained its telescopes on other worlds, old conventions gave way to a new kind of hedonistic freedom that celebrated sex, drugs, and rock 'n' roll. Derided as nerdy or dismissed as fluff, science fiction rarely gets credit for its catalyzing effect on this revolution. In *Strange Stars*, Jason Heller recasts sci-fi and pop music as parallel cultural forces that depended on one another to expand the horizons of books, music, and out-of-this-world imagery. In doing so, he presents a whole generation of revered musicians as the sci-fi-obsessed conjurers they really were: from Sun Ra lecturing on the black man in the cosmos, to Pink Floyd jamming live over the broadcast of the Apollo 11 moon landing; from a wave of Star Wars disco chart toppers and synthesiser-wielding post-punks, to Jimi Hendrix distilling the "purplish haze" he discovered in a pulp novel into psychedelic song. Of course, the whole scene was led by David Bowie, who hid in the balcony of a movie theater to watch *2001: A Space Odyssey*, and came out a changed man... If today's culture of Comic Con fanatics, superhero blockbusters, and classic sci-fi reboots has us thinking that the nerds have won at last, *Strange Stars* brings to life an era of unparalleled and unearthly creativity—in magazines, novels, films, records, and concerts—to point out that the nerds have been winning all along.

Decades of Science Fiction is an anthology of 27 short stories that illustrate the development and popularity of the genre. Through its collection of well-chosen, classic stories, it allows students to trace the evolution of science fiction from the days of H.G Wells and Verne through the present. The text contains important historical and contextual information and demonstrates how science fiction, the adaptable genre, relates to the important issues of our lives.

NATIONAL BESTSELLER • The Pulitzer Prize-winning author of *The Sixth Extinction* returns to humanity's transformative impact on the environment, now asking: After doing so much damage, can we change nature, this time to save it? RECOMMENDED BY PRESIDENT OBAMA AND BILL GATES • SHORTLISTED FOR THE WAINWRIGHT PRIZE FOR WRITING • NAMED ONE OF THE BEST BOOKS OF THE YEAR BY ESQUIRE AND PUBLISHERS WEEKLY • "Beautifully and insistently, Kolbert shows us that it is time to think radically about the ways we manage the environment."—Helen Macdonald, *The New York Times* That man should have dominion "over all the earth, and over every creeping thing that creepeth upon the earth" is a prophecy that has hardened into fact. So pervasive are human impacts on the planet that it's said we live in a new geological epoch: the Anthropocene. In *Under a White Sky*, Elizabeth Kolbert takes a hard look at the new world we are creating. Along the way, she meets biologists who are trying to preserve the world's rarest fish, which lives in a single tiny pool in the middle of the Mojave; engineers who are turning carbon emissions to stone in Iceland; Australian researchers who are trying to develop a "super coral" that can survive on a hotter globe; and physicists who are contemplating shooting tiny diamonds into the stratosphere to cool the earth. One way to look at human civilization, says Kolbert, is as a ten-thousand-year exercise in defying nature. In *The Sixth Extinction*, she explored the ways in which our capacity for destruction has reshaped the natural world. Now she examines how the very sorts of interventions that have imperiled our planet are increasingly seen as the only hope for its salvation. By turns inspiring, terrifying, and darkly comic, *Under a White Sky* is an utterly original examination of the challenges we face.

Compares what writers over the centuries have written about an imaginary future with the reality revealed by time.

The multiple Locus Award-winning annual collection of the year's best science fiction stories. In the new millennium, what secrets lay beyond the far reaches of the universe? What mysteries belie the truths we once held to be self-evident? The world of science fiction has long been a porthole into the realities of tomorrow, blurring the line between life and art. Now, in *The Year's Best Science Fiction: Thirty-Fifth Annual Collection*, the very best SF authors explore ideas of a new world. This venerable collection brings together award-winning authors and masters of the field. Featuring short stories from acclaimed authors such as Indrapramit Das, Nancy Kress, Alastair Reynolds, Eleanor Arnason, James S.A. Corey & Lavie Tidhar, an extensive recommended reading guide and a summation of the year in science fiction, this annual compilation has become the definitive must-read anthology for all science fiction fans and readers interested in breaking into the genre.

For the first time in a decade, a compilation of the very best in science fiction, from a world authority on the genre. For decades, the Year's Best Science Fiction has been the most widely read short science fiction anthology of its kind. Now, after thirty-five annual collections comes the ultimate in science fiction anthologies. In *The Very Best of the Best*, legendary editor Gardner Dozois selects the finest short stories for this landmark collection.

From Huxley's *Brave New World*, to Orwell's *1984*, to Atwood's *The Handmaid's Tale*, dystopian books have always been an integral part of both science fiction and literature, and have

influenced the broader culture discussion in unique and permanent ways. *Brave New Worlds* brings together the best dystopian fiction of the last 30 years, demonstrating the diversity that flourishes in this compelling subgenre. This landmark tome contains stories by Ursula K. Le Guin, Cory Doctorow, M. Rickert, Paolo Bacigalupi, Orson Scott Card, Neil Gaiman, Ray Bradbury, and many others.

FINALIST FOR 2018 KIRKUS PRIZE NAMED ONE OF THE "BEST LITERARY FICTION OF 2018" BY KIRKUS REVIEWS "Sci-fi in its most perfect expression...Reading it is like having a lucid dream of six years from next week, filled with people you don't know, but will." —NPR "[Williams's] wit is sharp, but her touch is light, and her novel is a winner." – San Francisco Chronicle "Between seasons of *Black Mirror*, look to Katie Williams' debut novel." —Refinery29 Smart and inventive, a page-turner that considers the elusive definition of happiness. Pearl's job is to make people happy. As a technician for the Apricity Corporation, with its patented happiness machine, she provides customers with personalized recommendations for greater contentment. She's good at her job, her office manager tells her, successful. But how does one measure an emotion? Meanwhile, there's Pearl's teenage son, Rhett. A sensitive kid who has forged an unconventional path through adolescence, Rhett seems to find greater satisfaction in being unhappy. The very rejection of joy is his own kind of "pursuit of happiness." As his mother, Pearl wants nothing more than to help Rhett—but is it for his sake or for hers? Certainly it would make Pearl happier. Regardless, her son is one person whose emotional life does not fall under the parameters of her job—not as happiness technician, and not as mother, either. Told from an alternating cast of endearing characters from within Pearl and Rhett's world, *Tell the Machine Goodnight* delivers a smartly moving and entertaining story about the advance of technology and the ways that it can most surprise and define us. Along the way, Katie Williams playfully illuminates our national obsession with positive psychology, our reliance on quick fixes. What happens when these obsessions begin to overlap? With warmth, humor, and a clever touch, Williams taps into our collective unease about the modern world and allows us see it a little more clearly.

Join Professor of Philosophy David Kyle Johnson, of King's College, on a 24-lecture exploration of the final frontiers of philosophy across several decades of science fiction in film and television. See how science fiction allows us to consider immense, vital - and sometimes controversial - ideas with a rare combination of engagement and critical distance.

In the new millennium, what secrets lay beyond the far reaches of the universe? What mysteries belie the truths we once held to be self-evident? The world of science fiction has long been a porthole into the realities of tomorrow, blurring the line between life and art. Now, in *The Year's Best Science Fiction: Thirty-Fourth Annual Collection*, the very best SF authors explore ideas of a new world. This venerable collection brings together award-winning authors and masters of the field. With an extensive recommended reading guide and a summation of the year in science fiction, this annual compilation has become the definitive must-read anthology for all science fiction fans and readers interested in breaking into the genre.

Science fiction stories dealing with the effects of technology on civilization include authors ranging from Jonathan Swift and Nathaniel Hawthorne to Isaac Asimov and Harlan Ellison. On the brink of a critical moment in human history, this book presents a vision of "planetary stewardship" - a rethinking of our relationship with our planet - and plots a new course for our future. The authors reveal the full scale of the planetary emergency we face - but also how we can stabilize Earth's life-support system. The necessary change is within our power, if we act now. In 2009, scientists identified nine planetary boundaries that keep Earth stable, ranging from biodiversity to ozone. Beyond these boundaries lurk tipping points. In order to stop short of these tipping points, the 2020s must see the fastest economic transition in history. This book demonstrates how societies are reaching positive tipping points that make this transition possible: groups such as Extinction Rebellion and the schoolchildren led by Greta Thunberg demand political action; countries are committing to eliminating greenhouse gas emissions; and one tipping point has even already passed - the price of clean energy has dropped below that of fossil fuels. The story is accompanied by unique images of Earth produced by Globaïa, the world's leading visualizers of human impact.

NATIONAL BOOK AWARD FINALIST | WINNER OF THE BANCROFT PRIZE. A landmark history??—??the sweeping story of the enslavement of tens of thousands of Indians across America, from the time of the conquistadors up to the early twentieth century. Since the time of Columbus, Indian slavery was illegal in much of the American continent. Yet, as Andrés Reséndez illuminates in his myth-shattering *The Other Slavery*, it was practiced for centuries as an open secret. There was no abolitionist movement to protect the tens of thousands of Natives who were kidnapped and enslaved by the conquistadors. Reséndez builds the incisive case that it was mass slavery??—??more than epidemics??—??that decimated Indian populations across North America. Through riveting new evidence, including testimonies of courageous priests, rapacious merchants, and Indian captives, *The Other Slavery* reveals nothing less than a key missing piece of American history. For over two centuries we have fought over, abolished, and tried to come to grips with African American slavery. It is time for the West to confront an entirely separate, equally devastating enslavement we have long failed truly to see. "The Other Slavery is nothing short of an epic recalibration of American history, one that's long overdue...In addition to his skills as a historian and an investigator, Reséndez is a skilled storyteller with a truly remarkable subject. This is historical nonfiction at its most important and most necessary." ??—?? Literary Hub, 20 Best Works of Nonfiction of the Decade ""One of the most profound contributions to North American history."??—??Los Angeles Times

Collects nine classic science fiction novels from 1953 to 1958.

"An engaging, beautifully synthesized page-turner" (Slate). The #1 New York Times bestseller and Time #1 Nonfiction Book of the Year: Hillary Rodham Clinton's most personal memoir yet, about the 2016 presidential election. In this "candid and blackly funny" (The New York Times) memoir, Hillary Rodham Clinton reveals what she was thinking and feeling during one of the most controversial and unpredictable presidential elections in history. She takes us inside the intense personal experience of becoming the first woman nominated for president by a major party in an election marked by rage, sexism, exhilarating highs and infuriating lows, stranger-than-fiction twists, Russian interference, and an opponent who broke all the rules. "At her most emotionally raw" (People), Hillary describes what it was like to run against Donald Trump, the mistakes she made, how she has

coped with a shocking and devastating loss, and how she found the strength to pick herself back up afterward. She tells readers what it took to get back on her feet—the rituals, relationships, and reading that got her through, and what the experience has taught her about life. In this “feminist manifesto” (The New York Times), she speaks to the challenges of being a strong woman in the public eye, the criticism over her voice, age, and appearance, and the double standard confronting women in politics. Offering a “bracing... guide to our political arena” (The Washington Post), *What Happened* lays out how the 2016 election was marked by an unprecedented assault on our democracy by a foreign adversary. By analyzing the evidence and connecting the dots, Hillary shows just how dangerous the forces are that shaped the outcome, and why Americans need to understand them to protect our values and our democracy in the future. The election of 2016 was unprecedented and historic. *What Happened* is the story of that campaign, now with a new epilogue showing how Hillary grappled with many of her worst fears coming true in the Trump Era, while finding new hope in a surge of civic activism, women running for office, and young people marching in the streets.

Decades of Science Fiction Glencoe/McGraw-Hill

Imagine, if you can, the world in the year 2100. In *Physics of the Future*, Michio Kaku—the New York Times bestselling author of *Physics of the Impossible*—gives us a stunning, provocative, and exhilarating vision of the coming century based on interviews with over three hundred of the world’s top scientists who are already inventing the future in their labs. The result is the most authoritative and scientifically accurate description of the revolutionary developments taking place in medicine, computers, artificial intelligence, nanotechnology, energy production, and astronautics. In all likelihood, by 2100 we will control computers via tiny brain sensors and, like magicians, move objects around with the power of our minds. Artificial intelligence will be dispersed throughout the environment, and Internet-enabled contact lenses will allow us to access the world’s information base or conjure up any image we desire in the blink of an eye. Meanwhile, cars will drive themselves using GPS, and if room-temperature superconductors are discovered, vehicles will effortlessly fly on a cushion of air, coasting on powerful magnetic fields and ushering in the age of magnetism. Using molecular medicine, scientists will be able to grow almost every organ of the body and cure genetic diseases. Millions of tiny DNA sensors and nanoparticles patrolling our blood cells will silently scan our bodies for the first sign of illness, while rapid advances in genetic research will enable us to slow down or maybe even reverse the aging process, allowing human life spans to increase dramatically. In space, radically new ships—needle-sized vessels using laser propulsion—could replace the expensive chemical rockets of today and perhaps visit nearby stars. Advances in nanotechnology may lead to the fabled space elevator, which would propel humans hundreds of miles above the earth’s atmosphere at the push of a button. But these astonishing revelations are only the tip of the iceberg. Kaku also discusses emotional robots, antimatter rockets, X-ray vision, and the ability to create new life-forms, and he considers the development of the world economy. He addresses the key questions: Who are the winner and losers of the future? Who will have jobs, and which nations will prosper? All the while, Kaku illuminates the rigorous scientific principles, examining the rate at which certain technologies are likely to mature, how far they can advance, and what their ultimate limitations and hazards are. Synthesizing a vast amount of information to construct an exciting look at the years leading up to 2100, *Physics of the Future* is a thrilling, wondrous ride through the next 100 years of breathtaking scientific revolution.

The literature of ideas. When author Pamela Sargent used those words to describe science fiction in 1975, the genre had exploded into the literary mainstream. As a literature of ideas, science fiction has proven to be a powerful metaphor for the world around us, offering a rich tapestry of imagination through which to explore how we lead, how we think, and how we interact. *To Boldly Go* assembles more than thirty writers from around the world—experts in leadership and strategy, senior policy advisors and analysts, professional educators and innovators, experienced storytellers, and ground-level military leaders—to help us better understand ourselves through the lens of science fiction. Each chapter of *To Boldly Go* draws out the lessons that we can learn from science fiction, drawing on classic examples of the genre in ways that are equally relatable and entertaining. A chapter on the burdens of leadership by *Ghost Fleet* author August Cole launches readers into the cosmos with Captain Avatar aboard the space battleship Yamato. In another chapter, the climactic Battle of the Mutara Nebula from *The Wrath of Khan* weighs the advantages of experience over intelligence in the pursuit of strategy. What does inter-species conflict in science fiction tell us about our perspectives on social Darwinism? Whether using *Star Trek: Deep Space Nine* to explore the nuances of maritime strategy or *The Expanse* to better understand the threat posed by depleted natural resources, *To Boldly Go* provides thoughtful essays on relevant subjects that will appeal to business leaders, military professionals, and fans of science fiction alike.

The murder of a world-famous physicist raises fears that the Illuminati are operating again after centuries of silence, and religion professor Robert Langdon is called in to assist with the case.

From New York Times bestselling author Cixin Liu comes a short story collection of captivating visions of the future and incredible re-imaginings of the past. In *To Hold Up the Sky*, Cixin Liu takes us across time and space, from a rural mountain community where elementary students must use physics to prevent an alien invasion; to coal mines in northern China where new technology will either save lives or unleash a fire that will burn for centuries; to a time very much like our own, when superstring computers predict our every move; to 10,000 years in the future, when humanity is finally able to begin anew; to the very collapse of the universe itself. Written between 1999 and 2017 and never before published in English, these stories came into being during decades of major change in China and will take you across time and space through the eyes of one of science fiction’s most visionary writers. Experience the limitless and pure joy of Cixin Liu’s writing and imagination in this stunning collection. Stories included are: *Contraction* *Full Spectrum* *Barrage* *Jamming* *The Village* *Teacher* *Fire in the Earth* *Time Migration* *Ode*

to joy Cloud of Poems Mirror Sea of Dreams Cloud of Poems The Thinker At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied. Tells what makes a science fiction writer tick. This books includes interviews with the genre's greatest writers, going all the back to the grand old men of the pulps, and finishing with the hottest contemporary SF writers.

The Golden Age of Science Fiction, from the early 1940s through the 1950s, saw an explosion of talent in SF writing, including authors such as Isaac Asimov, Robert A. Heinlein, and Arthur C. Clarke. Their writing helped science fiction gain wide public attention, and left a lasting impression upon society. The same writers formed the mold for the next three decades of science fiction, and much of their writing remains as fresh today as it was then.

From Nobel laureate, world-renowned doctor, and noted human rights activist Dr. Denis Mukwege comes an inspiring clarion call-to-action to confront the scourge of sexual violence and better learn from women's resilience, strength, and power. At the heart of Dr. Mukwege's message will be the voices of the many women he has worked with over the years. Dr. Mukwege will use individual cases to reassure all survivors that, even if their psychological wounds may never fully heal, they can recover and thrive with the right care and support. Dr. Mukwege's dramatic personal story is interwoven throughout as he explores the bigger issues that have become a focus of his advocacy. He will seek to explain why sexual violence is so often overlooked during war, and how governments need to recognize and compensate victims. He will also stress the importance of breaking down the taboos surrounding assault, and the necessity of building a system that supports women who come forward. His words advocate for saying 'no' to indifference and he asks readers to reckon with the West's involvement in perpetuating sexual violence in places like the Democratic Republic of Congo, and to confront the abuse taking place in their own communities. Sexual violence does not occur in a vacuum. The conflict in the Democratic Republic of Congo, which has raged for over 20 years and has claimed an estimated 5 million lives, is inseparable from Western patriarchy and economic colonization. And this cycle of violence and spoils is not limited to Congo. Dr. Mukwege's work has led him to South Korea, Latin America, the Middle East, and elsewhere in Africa, where he has found striking similarities in women's testimonies. The truth is, through the intricate ties of the global economy, we are all implicated in violence against women – whether it occurs amidst the fighting in the Democratic Republic of Congo or on college campuses in the West. And Dr. Mukwege's writing will address men as well, encouraging and guiding them to become allies in the fight against sexual abuse, in war and in peace. Building more inclusive, gender-balanced societies will require developing what he calls "positive masculinity" – a systemic change in male behavior and attitudes towards women. Dr. Mukwege hopes to inspire other men to speak out and join the struggle, rather than leaving women to fight the battle alone. He will also make the case, drawing from his experience and a wealth of research on the topic, that when women are involved as economic and political decision makers, all of society benefits. The Power of Women will illuminate the enduring strength of women in the face of violence and trauma, and give hope for the potential of individuals to turn the tide.
