Working capital is commonly understood as the fund needed to meet the day-to-day expenses of an enterprise. A finance manager finds that the funds for meeting these expenses get blocked in current assets. He, therefore, looks for liquidity support in net working capital (NWC), which is equivalent to the excess of current assets over current liabilities. A banker also looks at the size of NWC as the long-term stake of the business in funding the current assets. But for a production manager, liquidity is synonymous to uninterrupted supply of material inputs to the production lines. Similarly, for a marketing manager, if there is no production, his marketing outlets dry up despite demand in the market. While the finance manager discourages overstocking of inventory, the production manager and the marketing manager dread of being out of stock. In this conflict the goal of the organisation often takes a back seat. This book aims at resolving these

conflicts by adopting a techno-financial approach to working capital management. Whereas, in the Fourth Edition, a new chapter on Technological Progress, Innovations and Startups—A New Financing Methodology has been introduced to fill a long-felt gap in financing of emerging industries. Besides, the book is revised and updated extensively by incorporating the current researches in the field; particular mention can be made of Cash pooling system, Bullwhip effect and newer approaches to inventory recording system. Throughout the book, every concept is presented with worked-out examples and case studies for easy comprehension of the subject. The book is primarily addressed to postgraduate students majoring in Finance and to those pursuing professional courses in Accounts (CA) and Cost Accounting (ICWA). The book will also be very useful for practising finance executives, risk managers and also purchase/materials managers. TARGET AUDIENCE o MBA (Finance) o CA and ICWA Aspirants

In the last 20 years, the need for a financial expert to act as a witness and consultant to litigating attorneys has grown even more than litigation itself. Twenty years ago, few certified public accountants or economists offered litigation-related services; now, a large number devote much of their practice to this area. To be litigation service practitioners and accountants need to learn or enhance their litigation skills, including the fine points of their roles in trial preparation and testimony presentation, testimony presentation, deposition, direct examination, cross examination, understanding Sarbanes-Oxley rulings, and fraud investigations.

This 6th edition retains all of the classic features that have contributed to the book's success: clarity of expression, the focus on the accounting equation, student activities and real-life commentaries running through each chapter, and the inclusion of the Safe and Sure Annual Report as an example of a listed

Financial Accounting Tools for Business Decision Making John Wiley & Sons Libby/Libby/Short wrote this text based on their belief that the subject of financial accounting is inherently interesting, but financial accounting textbooks are often not. They believe most financial accounting textbooks fail to demonstrate that accounting is an exciting field of study and one that is important to future careers in business. When writing this text, they considered career relevance as their guide when selecting material, and the need to engage the student as their guide to style, pedagogy, and design. Libby/Libby/Short is the only financial accounting text to successfully implement a real-world, single focus company approach in every chapter. Students and instructors have responded very favorably to the use of focus companies and the real-world financial statements. The companies chosen are engaging and the decision-making focus shows the relevance of financial accounting regardless of whether or not the student has chosen to major in accounting.

analytics into the financial accounting course, and are pleased to provide the following data analytics resources. **Data Analytics and Decision-Making** The text provides numerous discussions on how decision-makers are increasingly relying on data analytics to make decisions using accounting information. Accounting software systems collect vast amounts of data about a company's economic events as well as its suppliers and customers. Business decision-makers take advantage of this wealth of data by using data analytics to gain insights and therefore make more informed business decisions. Data analytics involves analyzing data, often employing both software and statistics, to draw inferences. As both data access and analytical software improve, the use of data analytics to support decisions is becoming increasingly common at virtually all types of companies"--

While focusing on the underlying theories of financial analysis and valuation, this work aims to answer the question, "What is this company really worth?". It takes the view that sound forecasts of financial statements are the key input to a good valuation, and that other aspects of the valuation process are mechanical.
