

Handbook Of Communication And Aging Research Winedt

This book is a refreshingly honest self-help guide to aging well. It encourages readers to dispel gloom or overcome denial around the subject of aging and offers advice in a realistic, non-prescriptive format. Practical yet personable, chapters move through pertinent topics such as making the decision to retire and successfully navigating that transition; designing daily routines (your practice) and engaging in activities (your projects); connecting with others as relationships shift and evolve; and managing moods and emotional issues. The guide also supports readers coping with illness or injury, experiencing loss and grief, and those searching for meaning as they grow older. Written in a conversational style, *An Essential Guide to Aging Well* motivates its readers to be curious about this time of life, and to design the best possible version of it for themselves.

The topic of communication in elderly care is becoming ever more pressing, with an aging world population and burgeoning numbers of people needing care. This book looks at this critical but underanalyzed area. It examines the way people talk to each other in eldercare settings from an interdisciplinary and globally cross-cultural perspective. The small body of available research points to eldercare communication taking place with its own specific conditions and contexts. Often, there is the presence of various mental/physical ailments on the part of the care receivers, scarcity of time, resources and/or flexibility on the part of the care givers, and a mutual necessity of providing/receiving assistance with intimate personal activities. The book combines theory and practice, with linguistically informed analysis of real-life interaction in eldercare settings across the world. Each chapter closes with a "Practical Recommendations" section that contains suggestions on how communication in eldercare can be improved. This book is an important and timely publication that will appeal to researchers and carers alike.

Communication and Swallow Changes in Healthy Aging Adults compiles and presents the available research on healthy aging adults performance and abilities in the following areas: auditory comprehension, reading comprehension, speaking, writing, voice and motor speech abilities, cognition, and swallowing. This text also presents principles from the World Health Organization's International Classification of Functioning, Disability and Health and its applications to aging adults. One of the first texts to cover these principles, this book will address the need for a comprehensive view of communication and swallow issues in aging for students of speech-language pathology. Speech-language pathologist students will learn how to fully compare what would be considered normal for their elderly patients rather than overestimating or underestimating what aging adults are capable of doing. Knowing what would be considered within the spectrum of normal, will help speech-language pathologists to address therapy as effectively as possible. Having this information at hand is particularly important as the nation's population is aging at a rapid rate and there is a need for evidence-based practice in speech-language pathology. Written in an easy to follow format, *Communication and Swallow Changes in Healthy Aging Adults* includes original research data, discussion questions and a list of Quick Facts at the end of each chapter to summarize key points. This text will serve as a useful resource as students see elderly clients in on-campus speech and hearing clinics and when they intern at hospitals and long-term care facilities. Instructor Resources: PowerPoint Slides and an Image Bank Testimonial: *Communication and Swallowing Changes in Healthy Aging Adults* is a handy text, portable, and logically organized. The information is easy to follow complimented by information presented in tables/charts. This text would be helpful to a practicing therapist when making a differential diagnosis between a normal vs. atypical aging process. *Communication and Swallowing Changes in Healthy Aging Adults* would be an appropriate text for courses in Communications Disorders Departments for graduate students in a neuro course or a neurogenic communication disorders course, and in lifespan development courses as in the field of Psychology and Gerontology. Susan Durnford, M.S., CCC-SLP, Clinical Assistant Professor, Department of Speech-Language Pathology & Audiology, Ithaca College"

First published in 1999. Routledge is an imprint of Taylor & Francis, an informa company.

This essential volume explores the vital role of communication in the aging process and how this varies for different social groups and cultural communities. It reveals how communication can empower people in the process of aging, and that how we communicate about age is critically important to – and is at the heart of – aging successfully. Giles et al. confront the uncertainty and negativity surrounding "aging" – a process with which we all have to cope – by expertly placing communication at the core of the process. They address the need to avoid negative language, discuss the lifespan as an evolving adventure, and introduce a new theory of successful aging – the communication ecology model of successful aging (CEMSA). They explore the research on key topics including: age stereotypes, age identities, and messages of ageism; the role of culture, gender, ethnicity, and being a member of marginalized groups; the ingredients of intergenerational communication; depiction of aging and youth in the media; and how and why talk about death and dying can be instrumental in promoting control over life's demands. *Communication for Successful Aging* is essential reading for graduate students of psychology, human development, gerontology, and communication, scholars in the social sciences, and all of us concerned with this complex academic and highly personal topic.

Through narrative accounts, this book explores how women experience the health disruptions and illnesses that impact and often span their lives. The contributors examine how women's broader and ongoing life stories impact and are impacted by health disruptions and illnesses.

This volume provides contemporary discussions on new developments in aging research. It serves as an important update on the current state of research on the aging auditory system. *Listening to All Voices: Interdisciplinary Approaches to Understanding Hearing in Aging* Karen S. Helfer and Edward L. Bartlett *Genetic and Molecular Aspects of the Aging Auditory System* Shinichi Someya and Mi-Jung Kim *The Aging Cochlea and Auditory Nerve* Kevin K. Ohlemiller and Christopher Spankovich *Age-Related Changes in the Auditory Brainstem and Inferior Colliculus* Josef

Shader, and Arthur Wingfield Aging, Hearing Loss, and Listening Effort: Imaging Studies of the Aging Listener Stefanie E. Kuchinsky and Kenneth I. Vaden, Jr. Functional Consequences of Impaired Hearing in Older Adults and Implications for Intervention Larry E. Humes, M. Kathleen Pichora-Fuller, and Louise Hickson Emerging Clinical Translational Treatment Strategies for Age-Related Hearing Loss Robert D. Frisina, Carlos J. Cruz, Tanika T. Williamson, Xiaoxia Zhu, and Bo Ding.

The domain of Communication Disorders has grown exponentially in the last two decades and has come to encompass much more than audiology, speech impediments and early language impairment. The realization that most developmental and learning disorders are language-based or language-related has brought insights from theoretical and empirical linguistics and its clinical applications to the forefront of Communication Disorders science. The current handbook takes an integrated psycholinguistic, neurolinguistic, and sociolinguistic perspective on Communication Disorders by targeting the interface between language and cognition as the context for understanding disrupted abilities and behaviors and providing solutions for treatment and therapy. Researchers and practitioners will be able to find in this handbook state-of-the-art information on typical and atypical development of language and communication (dis)abilities across the human lifespan from infancy to the aging brain, covering all major clinical disorders and conditions in various social and communicative contexts, such as spoken and written language and discourse, literacy issues, bilingualism, and socio-economic status.

An advanced look at smart technology to promote the independence of the elderly and disabled Ongoing research and advancements in technology are essential for the continuing independence of elderly and disabled persons. The Engineering Handbook of Smart Technology for Aging, Disability, and Independence provides a thorough analysis of these technologies and the needs of the elderly and disabled, including a breakdown of demographics, government spending, growth rate, and much more. Each chapter is written by an expert in his or her respective field, and gives readers unparalleled insight into the research and developments in a multitude of important areas, including: User-need analyses, classifications, and policies Assistive devices and systems for people with motor disabilities Assistive devices and systems for people with visual and hearing impairments Human-machine interaction and virtual reality Assistive robotics Technology for user mobility and object manipulation Smart homes as assistant environments A discussion of emerging standards and guidelines to build accessible devices, tools, and environments This book is an indispensable resource for researchers and professionals in computer science, rehabilitation science, and clinical engineering. It also serves as a valuable textbook for graduate students in the aforementioned fields.

Aging has emerged as a major and urgent issue for individuals, organisations and governments of our time. In this well-timed and comprehensive handbook, key international contributors to the field of study come together to create a definitive map of the subject. Framed by an authoritative introductory chapter, the SAGE Handbook of Aging, Work and Society offers a critical overview of the most significant themes and topics, with discussions of current research, theoretical controversies and emerging issues, divided into sections covering: Key Issues and Challenges The Aging Workforce Managing an Aging Workforce Living in an Aging Society Developing Public Policy

This new edition has been completely rewritten and includes chapters that address key topics in diversity and aging: research methods, psychological aging; health beliefs, behaviors, and services; health disparities; informal and formal care for older persons; work and retirement; religious affiliation and spirituality; and death, dying, and bereavement. Taking a broad view of diversity, Mehrotra and Wagner discuss elements of diversity such as gender, race or ethnicity, religious affiliation, social class, rural-urban community location and sexual orientation. Including these elements allows them to convey some of the rich complexities of our diverse culture - complexities that provide both challenges to meet the needs of diverse population and opportunities to learn how to live in a pluralistic society. Throughout the book, Mehrotra and Wagner present up-to-date knowledge and scholarship in a way that engages readers in active learning. Rather than simply transmitting information, the authors place ongoing emphasis on developing readers' knowledge and skills; fostering higher order thinking and encouraging exploration of personal values and attitudes. Distinctive features of the book include: Opening vignettes for each chapter that present a sampling of how the issues to be discussed apply to diverse elders. Active learning experiences that invite readers to interview diverse elders, conduct internet searches, and give an analysis of a case study. Quizzes at the end of the chapters help readers ascertain the extent to which they have learned the material; the key for each quiz includes details about correct and incorrect responses so that additional learning can occur. Aging and Diversity Online boxes interspersed throughout the book provide internet resources that readers may use to find new research and publications. Suggested readings and audiovisual resources given at the end of each chapter serve as a guide to additional information on topics covered in the chapter. This approach of presenting the material will help the readers understand and apply key concepts and principles in ways that will not only improve the lives of older people they serve, but will also enhance their own aging experience.

Opportunities and optimism in Aging. Issues in Aging, 3rd edition takes an optimistic view of aging and human potential in later life. This book presents the most up-to-date facts on aging today, the issues raised by these facts, and the societal and individual responses that will create a successful old age for us all. Mark Novak presents the full picture of aging--exhibiting both the problems and the opportunities that accompany older age. The text illustrates how generations are dependent on one another and how social conditions affect both the individual and social institutions. Learning Goals -Upon completing this book, readers will be able to: -Understand how large-scale social issues--social attitudes, the study of aging, and demographic issues--affect individuals and social institutions -Identify the political responses to aging and how individuals can create a better old age for themselves and the people they know -Separate the myths from the realities of aging -Recognize the human side of aging -Trace the transformation of pension plans, health, and opportunities for personal expression and social engagement to the new ecology of aging today

As our global demographic shifts towards an increasingly aging population, we have an opportunity to transform how we

experience and think about getting older and embrace the diversity and contribution that this population can bring to society. The International Handbook of Positive Aging showcases the latest research and theory into aging, examining the various challenges faced by older adults and the ways in which we can bring a much-needed positive focus towards dealing with these. The handbook brings together disparate research from medical, academic, economic and social community fields, with contributions from NHS partners, service users, universities across the United Kingdom and collaborations with international research leaders in the field of aging. Divided into sections, the first part of the book focuses on introducing the concept of positive aging before going on to cover the body over the life course, well-being and care delivery. All contributors recognise the fact that we are living longer, which is providing us with a tremendous opportunity to enjoy and flourish in healthy and fulfilling later lives, and this focus on the importance of patient empowerment is integral to the book. This is a valuable reference source for those working in developmental psychology, clinical psychology, mental health, health sciences, medicine, neuropsychological rehabilitation, sociology, anthropology, social policy and social work. It will help encourage researchers, professionals and policymakers to make the most of opportunities and innovations to promote a person's sense of independence, dignity, well-being, good health and participation in society as they get older.

This second edition of the Handbook of Communication and Aging Research captures the ever-changing and expanding domain of aging research. Since it was first recognized that there is more to social aging than demography, gerontology has needed a communication perspective. Like the first edition, this handbook sets out to demonstrate that aging is not only an individual process but an interactive one. The study of communication can lead to an understanding of what it means to grow old. We may age physiologically and chronologically, but our social aging--how we behave as social actors toward others, and even how we align ourselves with or come to understand the signs of difference or change as we age--are phenomena achieved primarily through communication experiences. Synthesizing the vast amount of research that has been published on communication and aging in numerous international outlets over the last three decades, the book's contributors include scholars from North America and the United Kingdom who are active researchers in the perspectives covered in their particular chapter. Many of the chapters work to deny earlier images of aging as involving normative decrement to provide a picture of aging as a process of development involving positive choices and providing new opportunities. A recurring theme in many chapters is that of the heterogeneity of the group of people who are variously categorized as older, aged, elderly, or over 65. The contributors review the literature analytically, in a way that reveals not only current theoretical and methodological approaches to communication and aging research but also sets the future agenda. This handbook will be of great interest to scholars and researchers in gerontology, developmental psychology, and communication, and, in this updated edition, will continue to play a key role in the study of communication and aging.

Spanning history, the arts, religious/spiritual studies, and philosophy, this book offers an authoritative examination of humanistic perspectives on aging. New chapters include Eastern and Western perspectives on the elderly, Christian and Jewish traditions in aging, spirituality and aging, and much more.

This text employs a communication perspective to examine the aging process and the ability of individuals to adapt successfully to aging. It continues the groundbreaking work of the first edition, emphasizing a life-span approach toward understanding the social interaction that occurs during later life. The edition provides a comprehensive update on the existing and emerging research within communication and aging studies and considers such topics as notions of successful aging, positive and negative stereotypes toward older adults, and health communication issues. It raises awareness of the barriers facing elderly people in conversation and the importance such conversations have in elderly people's lives. The impact of nonrelational processes, such as hearing loss, are considered as they impact relationships with others and affect the ability to age successfully. The book is organized into 14 chapters. Each chapter is written so that the reader is presented with an exhaustive review of the pertinent and recent literature from the social sciences. As in the first edition, when the literature is empirically based, the communicative ramifications are then discussed. Readers of this volume will gain greater understanding of the importance of their communicative relationships and how significant they remain across the life span. Developed for students in communication, psychology, nursing, social gerontology, sociology, and related areas, Communication and Aging provides important insights on communication to all who are affected by the aging process.

Understanding Communication and Aging is the most accessible introductory text in the area of communication and aging. The book examines key topics such as interpersonal and family relationships in old age, media portrayals of aging, cultural variations in intergenerational communication, and health communication in old age. With a lively presentation style, the book presents central research findings in the area while engaging students more broadly in the important questions concerning communication and human aging: Why do some people age more successfully than others? What role does communication play in shaping our attitudes and feelings about getting older? Are there different or better ways in which we could get old? Students will emerge with a greater understanding of communication and aging research, and with a greater interest and sensitivity to the ways in which communication is shaped by, and itself influences, the aging process.

The Handbook of the Psychology of Aging, Seventh Edition, provides a basic reference source on the behavioral processes of aging for researchers, graduate students, and professionals. It also provides perspectives on the behavioral science of aging for researchers and professionals from other disciplines. The book is organized into four parts. Part 1 reviews key methodological and analytical issues in aging research. It examines some of the major historical influences that might provide explanatory mechanisms for a better understanding of cohort and period differences in psychological aging processes. Part 2 includes chapters that discuss the basics and nuances of executive function; the history of the morphometric research on normal brain aging; and the neural changes that occur in the brain with aging. Part 3 deals with the social and health aspects of aging. It covers the beliefs that individuals have about how much they can control various outcomes in their life; the impact of stress on health and aging; and the interrelationships between health disparities, social class, and aging. Part 4 discusses the emotional aspects of aging; family caregiving; and mental disorders and legal capacities in older adults. Contains all the main areas of psychological gerontological research in one volume Entire section on neuroscience and aging Begins with a section on theory and methods Edited by one of the father of gerontology (Schaie) and contributors represent top scholars in gerontology

The Handbook of Intergroup Communication brings together research, theory and application on traditional as well as innovative intergroup situations, exploring the communication aspect of these groups. The volume is organized into four domains – cross-disciplinary approaches to intergroup study; types/processes of communication between groups; communication between specific

group types; and arenas in which intergroup communication takes place. Editor Howard Giles worked with an internationally-based advisory board to develop and review content, and the contributors included here represent those scholars doing innovative and well-regarded work around the globe. The "intergroup" umbrella integrates and transcends many traditional conceptual boundaries in communication (including media, health, intercultural, organizational); hence the Handbook will appeal to scholars and graduate students not only in the core area of intergroup communication itself, but across varying terrains of study in communication and beyond, including intergroup relations and social psychology.

The revised Fourth Edition of The SAGE Handbook of Interpersonal Communication delivers a clear, comprehensive, and exciting overview of the field of interpersonal communication. It offers graduate students and faculty an important, state-of-the-art reference work in which well-known experts summarize theory and current research. The editors also explore key issues in the field, including personal relationships, computer-mediated communication, language, personality, skills, nonverbal communication, and communication across a person's life span. This updated handbook covers a wide range of established and emerging topics, including: Biological and Physiological Processes Qualitative and Quantitative Methods for Studying Interpersonal Communication Interpersonal Communication in Work, Family, Intercultural, and Health Contexts Supportive and Divisive Transactions Social Networks Editors Mark L. Knapp and John A. Daly have significantly contributed to the field of interpersonal communication with this important reference work—a must-have for students and scholars.

"Provides a unique perspective. I am particularly impressed with the sections on innovative design and methods to investigate cognitive aging and the integrative perspectives. None of the existing texts covers this material to the same level." —Donna J. La Voie, Saint Louis University "The emphasis on integrating the literature with theoretical and methodological innovations could have a far-reaching impact on the field." —Deb McGinnis, Oakland University The Handbook of Cognitive Aging: Interdisciplinary Perspectives clarifies the differences in patterns and processes of cognitive aging. Along with a comprehensive review of current research, editors Scott M. Hofer and Duane F. Alwin provide a solid foundation for building a multidisciplinary agenda that will stimulate further rigorous research into these complex factors. Key Features Gathers the widest possible range of perspectives by including cognitive aging experts in various disciplines while maintaining a degree of unity across chapters Examines the limitations of the extant literature, particularly in research design and measurement, and offers new suggestions to guide future research Highlights the broad scope of the field with topics ranging from demography to development to neuroscience, offering the most complete coverage available on cognitive aging

This second edition of the Handbook of Communication and Aging Research captures the ever-changing and expanding domain of aging research. Much like the first edition, this handbook sets out to demonstrate that aging is not only an individual proc. Ebersole & Hess' Gerontological Nursing and Healthy Aging is the only gerontological nursing text that follows a wellness-based, holistic approach to older adult care. Designed to facilitate healthy aging regardless of the situation or disease process, this text goes beyond simply tracking recommended treatments to address complications, alleviate discomfort, and help older adults lead healthy lives. Featuring evidence-based practice boxes, safety alerts, expanded tables, and careful attention to age, gender, and cultural differences, Ebersole & Hess' Gerontological Nursing and Healthy Aging is the most complete text on the market. Focus on health and wellness helps you gain an understanding of the patient's experience. AACN and the Hartford Institute for Geriatric Nursing core competencies integrated throughout. Consistent chapter organization and pedagogy, including Learning Objectives, Glossary, and Research and Study Questions/Activities. Evidence-Based Practice boxes summarize research findings that confirm effective practices or identify practices with unknown, ineffective, or harmful effects. Careful attention to age, cultural, and gender differences helps you understand these important considerations in caring for older adults Expanded tables, boxes, and forms, including the latest scales and guidelines for proper health assessment make information easy to find and use. Activities and discussion questions at the end of every chapter equip you with the information you need to assess the patient. UPDATED! Healthy People 2020 boxes integrate information about healthy aging. NEW! Safety Alerts highlight safe practices and quality of care QSEN competencies. NEW! Chapter on Neurologic Compromise expands content on stroke and Parkinson's disease. Statistics show that women live longer than men, and that they constitute a substantial majority of the North American population over age 50. But lack of empirical data on aging women has helped to perpetuate numerous myths and stereotypes. This reference provides a comprehensive overview of current research on women and aging. Chapters are written by expert contributors and are grouped in sections devoted to historical and theoretical views, economic concerns, health and lifestyle issues, demographic information, and relationships. Chapters reflect research on women from diverse racial and ethnic backgrounds, the particular needs of the rural elderly, the problem of sexism and ageism, and the impact of significant life events, such as retirement and widowhood. Chapters cite current research, and the volume closes with a selected bibliography of major studies.

Hands-on, fun, and stimulating, Handbook of Activities for the Elderly provides step-by-step directions for quick and easy activities to build effective communication skills. An educator for over thirty years, Denise Calhoun became interested in the similarities between young children and the elderly. After observing the downward spiral of her mom's health, she examined the aging process, noting how many symptoms reveal characteristics of early childhood development. From extensive research and observation of the cognitive decline in elderly family members and other elderly adults, Denise found that one of the key elements to sustaining quality of life was communication. Denise developed activities to promote interaction. Handbook of Activities for the Elderly includes a variety of meaningful activities that are practical and manageable to implement. The activities are broken into four categories: physical environment, social-emotional, nutrition/fitness, and language and cognition. This practical guide provides activities to stimulate minds and foster healthy development mentally, physically, and emotionally. Learn about different styles of art: chalk drawings, watercolor paintings, crayon resist paintings, and metallic drawings. Enjoy making tasty simple snacks such as orangeana salad, tropical treat sticks, and grape expectation. Plan a variety of social event, including talent night, comedy night, and fashion shows. And play new versions of well-known games. You can see growth and developing communication in your loved ones through the positive suggestions of Handbook of Activities for the Elderly.

"Leisure and Aging: Theory and Practice" provides students and professionals with a balanced perspective of current knowledge as it presents cutting-edge research in both fields. Supplemented by online ancillaries, this text offers a wealth of knowledge on various aspects of life for older people and the role of leisure in their lives.

The Handbook of Rural Aging goes beyond the perspective of a narrow range of health professions, disciplines, and community services that serve older adults in rural America to encompass the full range of perspectives and issues impacting the communities in which rural older adults live. Touching on such topics as work and voluntarism, technology, transportation, housing, the environment, social participation, and the delivery of health and community services, this reference work addresses the full breadth and scope of factors impacting the lives of rural

elders with contributions from recognized scholars, administrators, and researchers. This Handbook buttresses a widespread movement to garner more attention for rural America in policy matters and decisions, while also elevating awareness of the critical circumstances facing rural elders and those who serve them. Merging demographic, economic, social, cultural, health, environmental, and political perspectives, it will be an essential reference source for library professionals, researchers, educators, students, program and community administrators, and practitioners with a combined interest in rural issues and aging.

Organizational communication as a field of study has grown tremendously over the past thirty years. This growth is characterized by the development and application of communication perspectives to research on complex organizations in rapidly changing environments. Completely re-conceptualized, *The SAGE Handbook of Organizational Communication, Third Edition*, is a landmark volume that weaves together the various threads of this interdisciplinary area of scholarship. This edition captures both the changing nature of the field, with its explosion of theoretical perspectives and research agendas, and the transformations that have occurred in organizational life with the emergence of new forms of work, globalization processes, and changing organizational forms. Exploring organizations as complex and dynamic, the Handbook brings a communication lens to bear on multiple organizing processes.

"This interesting, easy-to-read book provides a comprehensive framework for considering communication and aging in the context of biology, sociology, and psychology. This thought provoking book is strongly anti-ageist. It could serve as a broad overview for anyone interested in the myriad of issues related to communication and aging." —CHOICE "Understanding Communication and Aging achieves a nice balance between the facts of growing old, the social forces that shape that process, and the communication factors that connect these two domains. With attention to both research and everyday applications, the text is thorough and inviting. I am delighted that a user-friendly, undergraduate text has finally been produced in the field of communication and aging. This book deserves to be an instant and sustained success." —Sandra Metts, Illinois State University "This book has so many strengths. I am especially pleased with the communication focus and the discussions on cultural issues, new technologies, and identities. I am impressed by Dr. Harwood's creativity and reaching out to learners via the use of info boxes, significant achievement profiles, literary/artistic descriptions, selected detailed summaries of research, and quotations about aging. All of these features auger very well for student learning and enthusiasm. I commend Dr. Harwood for his attention to detail, targeting multiple learning styles, and attending to instructors who value these kinds of features." —Jim L. Query, Jr., University of Houston "The way Professor Harwood ties together theory, research, and everyday experience into a text that is accessible, interesting, and fun to read is impressive. The focus is not merely psychological or interpersonal; the book spans multiple disciplines. This text is the total package!" —Jo Anna Grant, California State University, San Bernardino *Understanding Communication and Aging* is the most accessible introduction to the many ways aging in the 21st century is influenced by human communication processes, from face-to-face conversation to mass media representations. With a lively presentation, author Jake Harwood presents central research findings while engaging students with important questions concerning communication and aging. **Key Features** Covers the broad area of communication and older adulthood: The book examines key topics such as interpersonal and family relationships in old age, media portrayals of aging, cultural variations in intergenerational communication, and health communication in old age. **Shatters the myths and stereotypes of aging:** The book's orientation and perspective is on "healthy" living and aging. This anti-ageist approach encourages readers to reexamine their views on aging and become fluent at defending and promoting an anti-ageist ideology. **Provides concrete examples:** While taking a theoretical approach, the book includes coverage of applied issues such as health communication and age-related prejudice and discrimination.

This book brings together Sociologists, Computer Scientists, Applied Scientists and Engineers to explore the design, implementation and evaluation of emerging technologies for older people. It offers an innovative and comprehensive overview, not only of the rapidly developing suite of current digital technologies and platforms, but also of perennial theoretical, methodological and ethical issues. As such, it offers support for researchers and professionals who are seeking to understand and/or promote technology use among older adults. The contributions presented here offer theoretical and methodological frameworks for understanding age-based digital inequalities, participation, digital design and socio-gerontechnology. They include ethical and practical reflections on the design and evaluation of emerging technologies for older people, as well as guidelines for ethical, participatory, professional and cross-disciplinary research and practice. In addition, they feature state-of-the-art, international empirical research on communication technologies, games, assistive technology and social media. As the first truly multidisciplinary book on technology use among ageing demographics, and intended for students, researchers, applied researchers, practitioners and professionals in a variety of fields, it will provide these readers with insights, guidelines and paradigms for practice that transcend specific technologies, and lay the groundwork for future research and new directions in innovation.

The Routledge Handbook of Applied Communication Research provides a state-of-the-art review of communication scholarship that addresses real-world concerns, issues, and problems. This comprehensive examination of applied communication research, including its foundations, research methods employed, significant issues confronted, important contexts in which such research has been conducted, and overviews of some exemplary programs of applied communication research, shows how such research has and can make a difference in the world and in people's lives. The sections and chapters in this Handbook: explain what constitutes applied communication scholarship, encompassing a wide range of approaches and clarifying relationships among theoretical perspectives, methodological procedures, and applied practices demonstrate the breadth and depth of applied communication scholarship review and synthesize literature about applied communication areas and topics in coherent, innovative, and pedagogically sound ways set agendas for future applied communication scholarship. Unique to this volume are chapters presenting exemplary programs of applied communication research that demonstrate the principles and practices of such scholarship, written by the scholars who conducted the programs. As an impressive benchmark in the ongoing growth and development of communication scholarship, editors Lawrence R. Frey and Kenneth N. Cissna provide an exceptional resource that will help new and experienced scholars alike to understand, appreciate, and conduct high-quality communication research that can positively affect people's lives.

Mainstream gerontological scholarship has taken little heed of people ageing with disability, and they have also been largely overlooked by both disability and ageing policies and service systems. *The Handbook on Ageing with Disability* is the first to pull together knowledge about the experience of ageing with disability. It provides a broad look at scholarship in this developing field and across different groups of people with disability in order to form a better understanding of commonalities across groups and identify unique facets of ageing within specific groups. Drawing from academic, personal, and clinical perspectives, the chapters address topics stemming from how the ageing with disability experience is framed, the heterogeneity of the population ageing with disability and the disability experience, issues of social exclusion, health and wellness, frailty, later life, and policy contexts for ageing with disability in various countries. Responding to the need to increase access to knowledge in this field, the Handbook provides guideposts for researchers, practitioners, and policy makers about what matters in providing services, developing programmes, and implementing policies that support persons ageing with long-term disabilities and their families.

Emerging and currently available technologies offer great promise for helping older adults, even those without serious disabilities, to live healthy, comfortable, and productive lives. What technologies offer the most potential benefit? What challenges must be overcome, what problems must be solved, for this promise to be fulfilled? How can federal agencies like the National Institute on Aging best use their resources to support the translation from laboratory findings to useful,

marketable products and services? Technology for Adaptive Aging is the product of a workshop that brought together distinguished experts in aging research and in technology to discuss applications of technology to communication, education and learning, employment, health, living environments, and transportation for older adults. It includes all of the workshop papers and the report of the committee that organized the workshop. The committee report synthesizes and evaluates the points made in the workshop papers and recommends priorities for federal support of translational research in technology for older adults.

By highlighting the commonalities across a range of disciplines, this volume provides a unique and broad-based perspective on communication and ageing. This integrative approach brings together the best of current research and theory from communication, cognitive psychology, psycholinguistics and medical sociology. Centring on three topics - cognition, language and relationships - the book explores the individual areas as well as the ways in which they intersect. It brings to light the implications of individual differences among members of the elderly population as they affect communication, and illustrates the positive as well as the negative effects of the ageing process on language production, relational satisfaction and

Communication and Swallow Changes in Healthy Aging Adults compiles and presents the available research on healthy aging adults' performance and abilities in the following areas: auditory comprehension, reading comprehension, speaking, writing, voice and motor speech abilities, cognition, and swallowing. This text also presents principles from the World Health Organization's International Classification of Functioning, Disability and Health and its applications to aging adults. One of the first texts to cover these principles, this book will address the need for a comprehensive view of communication and swallow issues in aging for students of speech-language pathology. Speech-language pathologist students will learn how to fully compare what would be considered normal for their elderly patients rather than overestimating or underestimating what aging adults are capable of doing. Knowing what would be considered within the spectrum of normal, will help speech-language pathologists to address therapy as effectively as possible. Having this information at hand is particularly important as the nation's population is aging at a rapid rate and there is a need for evidence-based practice in speech-language pathology. Written in an easy to follow format, Communication and Swallow Changes in Healthy Aging Adults includes original research data, discussion questions and a list of Quick Facts at the end of each chapter to summarize key points. This text will serve as a useful resource as students see elderly clients in on-campus speech and hearing clinics and when they intern at hospitals and long-term care facilities. Instructor Resources: PowerPoint Slides and an Image Bank Testimonial: "Communication and Swallowing Changes in Healthy Aging Adults is a handy text, portable, and logically organized. The information is easy to follow complimented by information presented in tables/charts. This text would be helpful to a practicing therapist when making a differential diagnosis between a normal vs. atypical aging process. Communication and Swallowing Changes in Healthy Aging Adults would be an appropriate text for courses in Communications Disorders Departments for graduate students in a neuro course or a neurogenic communication disorders course, and in lifespan development courses as in the field of Psychology and Gerontology." ~ Susan Durnford, M.S.,CCC-SLP, Clinical Assistant Professor, Department of Speech-Language Pathology & Audiology, Ithaca College

Handbook of Communication and Aging ResearchRoutledge

Offering a fresh, authoritative take on a topic of increasing relevance, this book is comprehensive in scope, yet concise and accessible. Key contributors from health psychology, gerontology, and related fields pool their knowledge.

This book concentrates not only on the various communication disorders primarily affecting older adults, but also upon aspects of ageing that have an impact on caring services and strategies. The topics covered are those described by professionals who provide services to the communicatively impaired elderly as those most critical for both practising professionals and students who are preparing to serve the growing population of ageing persons.

An authoritative survey of different contexts, methodologies, and theories of applied communication The field of Applied Communication Research (ACR) has made substantial progress over the past five decades in studying communication problems, and in making contributions to help solve them. Changes in society, human relationships, climate and the environment, and digital media have presented myriad contexts in which to apply communication theory. The Handbook of Applied Communication Research addresses a wide array of contemporary communication issues, their research implications in various contexts, and the challenges and opportunities for using communication to manage problems. This innovative work brings together the diverse perspectives of a team of notable international scholars from across disciplines. The Handbook of Applied Communication Research includes discussion and analysis spread across two comprehensive volumes. Volume one introduces ACR, explores what is possible in the field, and examines theoretical perspectives, organizational communication, risk and crisis communication, and media, data, design, and technology. The second volume focuses on real-world communication topics such as health and education communication, legal, ethical, and policy issues, and volunteerism, social justice, and communication activism. Each chapter addresses a specific issue or concern, and discusses the choices faced by participants in the communication process. This important contribution to communication research: Explores how various communication contexts are best approached Addresses balancing scientific findings with social and cultural issues Discusses how and to what extent media can mitigate the effects of adverse events Features original findings from ongoing research programs and original communication models and frameworks Presents the best available research and insights on where current research and best practices should move in the future A major addition to the body of knowledge in the field, The Handbook of Applied Communication Research is an invaluable work for advanced undergraduate students, graduate students, and scholars.

In this comprehensive, state-of-the-art overview of risk communication, the field's leading experts summarize theory, current research, and practice in a range of disciplines and describe effective communication approaches for risk

situations in diverse contexts, such as health, environment, science, technology, and crisis. Offering practical insights, the contributors consider risk communication in all contexts and applications—interpersonal, organizational, and societal—offering a wider view of risk communication than other volumes. Importantly, the handbook emphasizes the communication side of risk communication, providing integrative knowledge about the models, audiences, messages, and the media and channels necessary for effective risk communication that enables informed judgments and actions regarding risk. Editors Hyunyi Cho, Torsten Reimer, and Katherine McComas have significantly contributed to the field of risk communication with this important reference work—a must-have for students, scholars, and risk and crisis communication professionals.
