Creating E-books in epub format is very important to sell E-books in electronic book stores. Most publishing and distribution E-book stores will not accept the epub format document for E-book if it includes any warnings or errors when validated and that is a very big challenge to all authors. I devoted this book to evaluate some tools that can be used for creating, validating and editing E-books to be in proper Epub format without errors. Personally, I suggest the following guidelines for preparing E-book in Epub format.

- Write the document in Microsoft word as .docx file. Make sure to properly setup the h1 headings and h2 headings and h3 headings on each section of the document as these data are the most important data used by the Epub management software to convert the document to epub format.
- Convert the Microsoft document to Epub format using Calibre E-book management software. Add all required metadata and the cover and also create a table of contents when converting the file.
- Using any Epub reader, check if the layout of epub document according to the headings you

made on the word document is good and comfortable to any reader. • Validate the epub document to see if it has errors and warnings using the website <http://validator.idpf.org>. • Then try to troubleshoot and identify the exact location of the errors detected by the epub validator on the epub document by tracing the code view of the epub document using Sigil epub editor. Then, modify the word document to eliminate the errors. And reconvert the word document to epub format using Calibre E-book management software. Validate the updated epub document for any errors again. This book contains the following sections: 1. Some online publishing and distribution stores 2. Epub Validators 3. Creation Epub file through online websites 4. Common software's to convert a file to Epub format 5. Converting document to Epub format using Calibre software 6. Editing Epub documents using Sigil Epub Editor

No Code Required presents the various design, system architectures, research methodologies, and evaluation strategies that are used by end users programming on the Web. It also presents the tools that will allow users to participate in the creation of their own Web. Comprised of seven parts, the book provides basic information about the field of end-user programming. Part 1 points out that the Firefox browser is one of the differentiating factors considered for end-user programming on the Web. Part 2 discusses the automation and customization of the Web. Part 3 covers the different approaches to proposing a specialized platform for creating a new Web browser. Part 4 discusses three systems that focus on the customized tools that will be used by the end users in exploring large amounts of data on the Web. Part 5 explains the role of natural language in the end-user programming systems. Part 6 provides an overview of the assumptions on the accessibility of the Web site owners of the Web content. Lastly, Part 7 offers the idea of the Web-active end user, an individual who is seeking new technologies. The first book since Web 2.0 that covers the latest research, development, and systems emerging from HCI research labs on end user programming tools Featuring contributions from the creators of Adobe's Zoetrope and Intel's Mash Maker, discussing test results, implementation, feedback, and ways forward in this booming area

Even relatively experienced users of Microsoft Word are often frustrated when trying to create specialized documents such as newsletters, brochures, grant applications and proposals. While templates are available on the Internet, these rarely include instructions or show how to modify and customize the template. This book walks the reader through the creation of new business documents and the modification of templates, building on included samples. The reader gains a clear grasp of where to start, what to include, why charts are helpful - and
