The Kenya Gazette is an official publication of the government of the Republic of Kenya. It contains notices of new legislation, notices required to be published by law or policy as well as other announcements that are published for general public information. It is published every week, usually on Friday, with occasional releases of special or supplementary editions within the week.

The published works are derived from the Zoological catalogue of Australia database. Taxa in the Australian fauna are divided among volumes to form sets of about 1800-2000 species available names, such that each volume comprises the whole or part of one or more major groups.

The Catalogue of Palaeartic Coleoptera provides information about all beetles occurring in Europe, North Africa and Asia north of the tropics.

The AFGL-instrumented MC-130E aircraft made several 8-min particle-sampling passes off the

San Francisco coast on 10 July 1978 at levels from 100 to 1000 ft altitude. Spectrometers capable of recording particles from 2 to 6400 micrometers were used, but in the existing cloudless conditions only particles between 2 and 30 micrometers were detected. These were recorded by the PMS axial scattering spectrometer probe.

In the elderly, the coexistence of various diseases, the presence of involitional and degenerative changes, and the occurrence of both physical and cognitive problems represent “the norm.” It is therefore important to know how to distinguish the healthy elderly from those in need of treatment as a sound basis for avoiding overdiagnosis and overtreatment. This aspect is a central theme in Geriatric Imaging, which covers a wide range of applications of different imaging techniques and clearly explains both the potential and the limitations of diagnostic imaging in geriatric patients. Individual sections are devoted to each major region or system of the body, and a concluding

section focuses specifically on interventional procedures. The book, written by recognized experts in the field, is superbly illustrated and will be an ideal resource for geriatricians, radiologists, and trainees.

In algebraic topology some classical invariants - such as Betti numbers and Reidemeister torsion - are defined for compact spaces and finite group actions. They can be generalized using von Neumann algebras and their traces, and applied also to non-compact spaces and infinite groups. These new L2-invariants contain very interesting and novel information and can be applied to problems arising in topology, K-Theory, differential geometry, non-commutative geometry and spectral theory. The book, written in an accessible manner, presents a comprehensive introduction to this area of research, as well as its most recent results and developments.
