The international multi-topic conference IMTIC 2008 was held in Pakistan during April 11–12, 2008. It was a joint venture between Mehran University, Jamshoro, Sindh and Aalborg University, Esbjerg, Denmark. Apart from the two-day main event, two workshops were also held: the Workshop on Creating Social Semantic Web 2.0 Information Spaces and the Workshop on Wireless

Sensor Networks. Two hundred participants registered for the main conference from 24 countries and 43 papers were presented; the two workshops had overwhelming support and over 400 delegates registered. IMTIC 2008 served as a platform for international scientists and the engineering community in general, and in particular for local scientists and the engineering community to share and cooperate in various fields of interest. The topics presented had a reasonable balance between theory and practice in multidisciplinary topics. The conference also had excellent topics covered by the keynote speeches keeping in view the local requirements, which served as a stimulus for students as well as experienced participants. The Program Committee and various other committees were experts in their areas and each paper went through a double-blind peer review process. The conference received 135 submissions of which only 46 papers were selected for presentation: an acceptance rate of 34%.

Bt cotton remains one of the most widely grown biotech crops among smallholder farmers. Numerous studies, including those previously conducted in Pakistan, attest to its yield and cost advantages. However, the effectiveness of Bt toxin, which depends on many technical constraints, is heterogeneous. Furthermore, in Pakistan, the diffusion of Bt cotton varieties occurred despite a weak regulatory system and without seed quality control; evidence demonstrates that varieties sold as Bt may not contain the genes or express them effectively. We use data collected from a sample that is statistically representative of the nation's cotton growers

to test the effects of Bt cotton use on productivity in a damage control framework. Unlike previous studies, we employ five measures of Bt identity: name, official approval status, farmer belief, laboratory tests of Bt presence in plant tissue, and biophysical assays measuring Bt effectiveness. Only farmers' belief that a variety is Bt affects cotton productivity. Although all measures reduce damage from pests, the biophysical indicators have the largest effect, and official approval has the weakest. For applied economists, findings highlight the importance of getting the data right concerning Bt. For policy makers, they suggest the need, on ethical if not productivity grounds, to monitor variety integrity closer to point of sale.

501 Synonyms and Antonym Questions is designed to help students prepare for the verbal sections of most assessment and entrance exams. The book increases a student's vocabulary and refines their knowledge of words, bringing about higher standardized test scores and more effective verbal and written communication. Questions in this book prepare students for the synonym and antonym problems found on most standardized tests—including high school entrance exams, the SAT, civil service exams, and the GRE. The book increases in difficulty as students move through each exercise. All answers are explained, featuring short definitions and terms that clarify word meanings and their opposites for effective studying and positive reinforcement.

The extent of urban air pollution in Pakistan—South Asia's most urbanized country—is among the world's most severe, significantly damaging human health, quality of

life, and the economy and environment of Pakistan. The harm from Pakistan's urban air pollution is among the highest in South Asia, exceeding several high-profile causes of mortality and morbidity in Pakistan. Improved air quality management (AQM) in Pakistan can have notable economic and health benefits. For example, the estimated health benefits per dollar spent on cleaner diesel are approximately US \$1–1.5 for light-duty diesel vehicles and US \$1.5–2.4 for large buses and trucks. This report advocates that Pakistan allocate resources to AQM, because its air quality is severely affecting millions of Pakistanis, and because experiences around the world indicate that interventions can significantly improve air quality. This report details a broad spectrum of research on Pakistan's AQM challenges, and identifies a comprehensive set of steps to improve air quality. The research presented here underpins the conclusions that addressing Pakistan's urban air pollution requires coordinated interventions to strengthen AQM, build agencies' institutional capacity, bolster AQM's legal and regulatory framework, implement policy reforms and investments, and fill knowledge gaps. However, Pakistan's policy makers face major obstacles, including limited financial, human, and technical resources, and can pursue only a few AQM interventions at the same time. In the short term, Pakistan's AQM should give highest priority to reducing pollutants linked to high morbidity and mortality: PM<sub>2.5</sub> (and precursors like SO<sub>x</sub> and NO<sub>x</sub>) from mobile sources. A second-level short-term priority could be PM<sub>2.5</sub>, SO<sub>x</sub>, and emissions of toxic metals from stationary sources. An important

medium-term priority should be mass transportation in major cities, controlling traffic, and restricting private cars during high-pollution episodes. A long-term priority could be taxing hydrocarbons, based on their contribution to greenhouse gases.

This publication describes the key issues facing the school education system in Pakistan, highlights the challenges, and suggests some possible directions for reform---with a focus on two provinces: Sindh and Punjab. While average years of schooling in Pakistan have increased along with life expectancy and per capita income, inequality remains high and, by other education measures, the record remains dismal. Illiteracy is widespread and almost 23 million children aged 5–16 are not in school---a worrying statistic for a country whose current workforce is young, mostly unskilled, and poorly prepared for productive employment.

Humans, especially children, are naturally curious. Yet, people often balk at the thought of learning science--the "eyes glazed over" syndrome. Teachers may find teaching science a major challenge in an era when science ranges from the hardly imaginable quark to the distant, blazing quasar. *Inquiry and the National Science Education Standards* is the book that educators have been waiting for--a practical guide to teaching inquiry and teaching through inquiry, as recommended by the National Science Education Standards. This will be an important resource for educators who must help school boards, parents, and teachers understand "why we can't teach the way we used to." "Inquiry" refers to the diverse

ways in which scientists study the natural world and in which students grasp science knowledge and the methods by which that knowledge is produced. This book explains and illustrates how inquiry helps students learn science content, master how to do science, and understand the nature of science. This book explores the dimensions of teaching and learning science as inquiry for K-12 students across a range of science topics. Detailed examples help clarify when teachers should use the inquiry-based approach and how much structure, guidance, and coaching they should provide. The book dispels myths that may have discouraged educators from the inquiry-based approach and illuminates the subtle interplay between concepts, processes, and science as it is experienced in the classroom. Inquiry and the National Science Education Standards shows how to bring the standards to life, with features such as classroom vignettes exploring different kinds of inquiries for elementary, middle, and high school and Frequently Asked Questions for teachers, responding to common concerns such as obtaining teaching supplies. Turning to assessment, the committee discusses why assessment is important, looks at existing schemes and formats, and addresses how to involve students in assessing their own learning achievements. In addition, this book discusses administrative assistance, communication with parents, appropriate teacher evaluation, and other avenues to promoting and supporting this new teaching paradigm.

About the Book : In September 1996 a fourteen-year-old Fatima Bhutto hid in a windowless dressing room shielding her baby brother while shots rang out in the streets outside the family home in Karachi. This was the evening that her father, Murtaza, was murdered along with six of his associates. In December 2007 Benazir Bhutto, Fatima's aunt, and the woman she had publicly accused of ordering her father's murder, was assassinated in Rawalpindi. It was the latest in a long line of tragedies for one of the world's best known political dynasties. *Songs of Blood and Sword* tells the story of the Bhuttos, a family of rich feudal landlords who became powerbrokers in the newly created state of Pakistan; the epic tale of four generations of a family and the political violence that would destroy them. It is the history of a family and nation riven by murder, corruption, conspiracy and division, written by one who has lived it, in the heart of the

storm. The history of this extraordinary family mirrors the tumultuous events of Pakistan itself, and the quest to find the truth behind her father's murder has led Fatima to the heart of her country's volatile political establishment. Finally Songs of Blood and Sword is about a daughter's love for her father and her search to uncover, and to understand, the truth of his life and death. About the Author : - Fatima Bhutto was born in Afghanistan in 1982. She studied at Columbia University and the School of Oriental and African Studies at the University of London. She currently writes columns for The Daily Beast, New Statesman and other publications. She lives in Karachi, Pakistan.
