In the 1950s, a method called Material Requirements Planning (or "MRP") changed the world of manufacturing forever. But times have changed--customer tolerance times are shorter, product variety and complexity has increased, and supply chains have spread around the world. MRP is dramatically failing in this "New Normal." Demand Driven Material Requirements Planning (DDMRP), Version 3 presents a practical, proven, and emerging method for supply chain planning and execution that effectively brings the 1950s concept into the modern era. The foundation of DDMRP is based upon the connection between the creation, protection, and acceleration of the flow of relevant materials and information to drive returns on asset performance in the New Normal. Using an innovative multi-echelon "Position, Protect and Pull" approach, DDMRP helps plan and manage inventories and materials in today's more complex supply scenarios, with attention being paid to ownership, the market, engineering, sales, and the supply base. It enables a company to decouple forecast error from supply order generation and build in line to actual market requirements, and promotes better and quicker decisions and actions at the planning and execution level. DDMRP is already in use by MAJOR Global 1000 companies. This book is THE definitive work on DDMRP, and will be required as courseware for all those taking the Certified Demand Driven Planner (CDDP) Program. New Features in Version 3 Full color, with the use in specific, consistent, and focused ways to clearly and effectively highlight planning, execution, and model reconfiguration priorities. Expanded Appendix E, looking at the most recent innovations of DDMRP. Revised graphics scattered throughout the book.

The methods used for inventory valuation have been transformed with SAP S/4HANA. The material ledger is now integrated with the Universal Journal and is the sole means for valuing materials. This book covers how valuation is managed in up to three different currencies, in parallel, without requiring the actual costing functionality. Learn how the material ledger interacts with the Universal Journal and how to configure the currencies used for parallel valuation. Investigate various valuation approaches and see how legal, group, and profit center valuation views can be used to help understand company profitability. Be guided through the configuration steps that enable these multiple valuation approaches. For those who are using or intending to use actual costing, learn how the actual cost is determined and the steps required to set this up to achieve maximum benefit. Find out how the actual costing run works and how alternative valuation runs can be used to provide additional information about inventory values. Review the optional business functions FIN_CO_COGM for parallel valuation of cost of goods manufactured, and LOG_MM_SIT for intercompany stock-in-transit and actual costing to see how they can be used for additional analysis of inventory. Investigate the different forms of balance sheet valuation and how they interact with the material ledger. - Valuation in parallel currencies, with and without transfer pricing - Defining currencies and using them with the material ledger - Valuation using standard cost, moving average cost, and actual cost - Balance sheet valuation methods

SAP is a powerful software that meets the requirement of business all over the world. This well-organised book comprising 34 chapters is useful for both beginners and professionals. Being a learning guide and a user manual, the book will be immensely valuable for all those who are training to be SAP consultant. If you are a material/production manager, a QM professional or a business executive, you will find that the book brings a lot of convenience in your work and minimises inventory losses. A New Approach to SAP Implementation Structured dialog :The dialog between the consultant and the users should be based on the structure of this book. The consultant would demonstrate a business transaction, e.g. goods receipt, in its simplest form. He would then explain the data items on the screens, their meaning and significance. He would enquire whether the data item is relevant for the client company. The data items that are not relevant can be hidden in the implementation, and related configuration marked as not required. When the consultant would come to a section explaining IMG node, his questions to the user would be designed to collect the information required to configure that node. Prototyping :As the structured dialog continues, the consultant would go on doing the configuration. By the end of the dialog, the consultant would have built a company-specific prototype. Training and trials :The prototype would be a rough-cut implementation of SAP for the company. It would be used for training the users. After training, the users would try out the system. They would perform routine transactions several times using real-life data of their company. They would try different scenarios and record their observations. Refinement :After prototype trials, the consultant and the users would sit together to discuss what the users required to do, but could not do with the prototype. The consultant would use this input to refine the prototype and to build new functionality, if needed. Configuration manual :The documentation of SAP implementation includes a configuration manual. This configuration manual should be structured on the lines of this book as explained in Chapter 34. Such a configuration manual will be easy to understand as it groups logically related elements together. User manual :This book will serve as a generic user manual. Company-specific user manual can also be structured on the lines of this book including only company-specific guidelines for the users.
