The right of refugees and internally displaced persons to return to their homes and places of residence in their country or place of origin following a refugee crisis has evolved significantly as a human rights norm over the past decade. Not only have several commentators and UN human rights bodies stressed the need for international peace-keeping operations to address effectively issues of housing and property rights, the past decade has seen international peace-keeping operations recognize these issues as a central component of peace- building efforts, and as indispensable to the promotion of peace, prosperity and development in post-conflict settings. Legal mechanisms mandated to address property issues and disputes have been established in particular national contexts to assist refugees and internally displaced persons (IDPs) to return to their homes, and there has emerged an explicit right of refugees and IDPs to restoration of their property rights, or compensation where restoration is no longer feasible. This is in stark contrast to the treatment of displaced persons over past centuries, whereby the homes and lands of those displaced, who were not on the side of the victors or those who remained in power, were lost forever. The aim of this book is to provide a comprehensive overview of property restitution in post-conflict Kosovo.

Life, liberty, and the pursuit of housing: an increasingly difficult quest in the contemporary urban United States, where crime, urban blight, and continuing capital decay undercut the advantages of city living. The American dream has moved to the suburbs; the nightmare of our cities prompts new recognition both in the president's cabinet and the college curriculum. The editors of this book have updated their acclaimed earlier collection, providing new introductory articles; new papers, such as, Discrimination in Housing Prices and Mortgage Lending, A Summary Report of Current Findings from the Experimental Housing Allowance Program, Alternative Mortgage Designs and Their Effectiveness in Eliminating Demand and Supply Effects on Inflation; and a new bibliography of the literature. Additional chapters focus on differing strategies for improved urban housing and renewal by providing concrete suggestions for distributing existing resources and allocating new funding. The bibliography provides the best single guide to the current literature on housing. Housing Urban America, in this new edition, is an important guide to those students and scholars fascinated by the essential questions of adequate housing: its social costs, and the source of the revenues to provide it.

PC are used exclusively for gov't.-related purchases; transactions include acquisitions at or below the \$2,500 threshold, commercial training request valued at or below \$25,000, and payments on contracts. The benefits of using PC are lower transaction processing costs and less "red tape" for both the gov't. and vendors. This audit of the Army's PC program addresses whether: the Army's overall control environ. and mgmt. of the PC program were effective, the Army's internal control activities operated effectively and provide reasonable assurance that PC were used appropriately, and indications existed of fraudulent, improper, and questionable transactions. global efforts made to resolve issues Incorporates numerous case studies to more clearly convey concepts and chart the development of guidelines and legislation regulating issues in biotechnology Takes a straightforward approach to highlight and discuss both the benefits and risks associated with the latest biotechnologies'. . . fine compilation of essays dealing with international land and property taxation issues. . . the book is well researched and readable in presenting the tax systems. . . The book would be more than appropriate as additional reading for a master's level class in taxation. It could supplement an international tax class, or be used in a state and local tax class to present contrasts and complexities of the issue in other countries.' – Malichi van Tassell Tor, The Journal of the American Taxation Association'. . . this is quite an achievement. Thanks to the nature of the case studies and the contributing authors the volume is inherently international in its scope and should appeal to practitioners, teachers, and students interested in land and property taxation, international economic development, and land and real-estate studies.' – Scott Orford, Environment and Planning B: Planning and Design 'I have found the book International Handbook of Land and Property Taxation a very meaningful and enlightening book to read. The editors Bird and Slack have developed a theoretically sound framework, backed by economic conceptions in order to attempt a comprehensive treatment on tax administration on land and property. Specifically and yet more broadly, they have to their credit managed to throw light of sufficient depth on key issues that include the tax base and rate, the tax burden and the tax policy decision makers. The international dimension is just as imperative to consider and the editors have effectively succeeded to render an in-depth treatment in this regard. This imperative is also a unique and important contribution to empirical real estate studies within the tax discipline, and the editors should be highly commended in this effort. I am very encouraged with the academic rigor of this book publication. . .' – David Ho, Journal of Property Investment and Finance Taxes on land and property exist all over the world in many forms and are an important source of finance for local governments. The extent to which local governments have control over property taxes is often an important determinant of their ability to make autonomous expenditure decisions. This comprehensive Handbook explores case studies of land and property taxation in 25 countries (five in each of five regions – OECD, central and eastern Europe, Asia, Africa, and Latin America), and focuses on the potential contributions of the property tax to the revenues of urban and rural governments and to more efficient land use. Introductory chapters highlight the diversity in the application of land and property taxes among the countries. Major policy alternatives with respect to taxing land and property are discussed, including the choice of tax base, exemptions, methods of determining the tax base, tax rates, differential treatment of different classes of property (such as farms, residences, commercial properties), and the process of tax administration. Other taxes levied on land, such as land transfer taxes, development charges and unearned increment taxes, are also reviewed, as is recent experience with property tax reform in a number of countries. This major reference work will provide a valuable resource and necessary addition to the libraries of government officials, municipal associations, property assessors, international agencies, teachers and students of public finance.

It commences with a consideration of the origins and evolution of the right to property restitution for refugees and internally displaced persons. It provides the reader with an outline of the situation in Kosovo prior to the 1999 armed conflict, the developments that led to the international property related intervention, and the subsequent establishment of the HPD/HPCC (the Housing and Property Directorate and its independent quasi judicial body the Housing and Property Claims Commission). The international property-related intervention is considered from a legal, institutional, operational and administrative perspective. It also provides a comprehensive outline of the jurisprudence of the Commission and concludes with an account of the lessons learned from the process over its six years of operations.
