For fans of *How to Babysit a Grandpa* comes a tongue-in-cheek story that is a step-by-step manual for putting your monster to bed. If you have a monster that won't go to bed, don't bother asking your parents to help. They know a lot about putting kids to bed, but nothing about putting monsters to bed. It's not their fault; they're just not good at it. Read this book instead. It will tell you what to feed your monster before bed (it's not warm milk), and what to sing to your monster (it's not a soothing lullaby), and what to read to your monster to send him off to dreamland in no time (the scarier, the better). Just make sure you don't get too good at putting monsters to bed—or you might have a BIG problem on your hands! So pervasive are human impacts on the planet that it's said we live in a new geological epoch: the Anthropocene. In *Under a White Sky*, Elizabeth Kolbert takes a hard look at the new world we are creating. Along the way, she meets biologists who are trying to preserve the world's rarest fish, which lives in a single tiny pool in the middle of the Mojave; engineers who are turning

carbon emissions to stone in Iceland; Australian researchers who are trying to develop a “super coral” that can survive on a hotter globe; and physicists who are contemplating shooting tiny diamonds into the stratosphere to cool the earth. One way to look at human civilization, says Kolbert, is as a ten-thousand-year exercise in defying nature. In *The Sixth Extinction*, she explored the ways in which our capacity for destruction has reshaped the natural world. Now she examines how the very sorts of interventions that have imperiled our planet are increasingly seen as the only hope for its salvation. By turns inspiring, terrifying, and darkly comic, *Under a White Sky* is an utterly original examination of the challenges we face.

As Gregor Samsa awoke one morning from uneasy dreams he found himself transformed in his bed into a gigantic insect. The Metamorphosis - the masterpiece of Franz Kafka - was first published in 1915 and is one of the seminal works of fiction of the twentieth century. The novel is cited as a key influence for many of today's leading authors; as Auden wrote: "Kafka is important to us because his predicament is the predicament of modern man".
Traveling salesman, Gregor Samsa, wakes to find himself transformed into a large, monstrous insect-like creature. The cause of Gregor's transformation is never revealed, and as he attempts to adjust to his new condition he becomes a burden to his parents and sister, who are repelled by the horrible, verminous creature Gregor has become. A harrowing, yet strangely comic, meditation on human feelings of inadequacy, guilt, and isolation, The Metamorphosis has taken its place as one of the most widely read and influential works of twentieth-century fiction.

Anne loves autumn in Avonlea, and she's been enjoying her first three weeks of school. It helps that she walks to school with and sits next to her kindred spirit, Diana Barry. However, one day, Gilbert Blythe joins the class. According to Diana, he's very handsome, and smart too. However, Gilbert immediately gets on Anne's nerves. When he pulls on Anne's braid and calls her "Carrots" because of her red hair, enough is enough. How can Anne enjoy school when Gilbert is ruining everything? Anne vows never to talk to Gilbert again, and even stops going to school for a time when her teacher forces Anne to sit next to her rival. But later, when Anne has an accident on the pond and her wooden plank sinks, who should come to her rescue but her nemesis, Gilbert Blythe? Why is a flamingo pink? Can a parrot talk? Is a bald eagle really bald? This follow-up to the hugely successful *The Big Book of Bugs*, *The Big Book of Beasts* and *The Big Book of the Blue* answers these questions and many more. It opens with introductory spreads explaining how to recognize different bird's eggs, the bird family tree, why different species of birds have different beaks and feathers, and why some birds migrate and travel vast distances every year. Subsequent spreads, illustrated with various habitats, are dedicated to specific varieties of bird, including hummingbirds, peacocks, flamingos, bald eagles, secretary birds, albatrosses and red-crowned cranes. Some will teach children how to spot different birds within a specific variety, for example how to differentiate the American robin from the European robin. Others explore bird habitats, for example showing how birds adapt to live in cities. Finally, the book invites young bird spotters to protect birds where they live and make their gardens bird friendly. This is a big, beautiful book to look at again and again.
