And in my opinion, that makes every zombie hunter a very special breed of warrior. — Dean Walters - survivor & zombie hunter

I am writing this to be an encouragement to others. I pray this will be a help to some that may be struggling with things in their life. I have made many mistakes and wasted a lot of time for God over the 45 plus years that I have been saved, and I am praying that others will be able to see how the Lord has worked in my life. Maybe others will be able to do more for God than I did from reading this. Just keep trusting in the Lord and see what He can do for you and with you.

new challenges have emerged for information security specialists. A Multidisciplinary Introduction to Information Security presents a range of topics on the security, privacy, and safety of information and communication technology. It brings together methods in pure mathematics, computer and telecommunication sciences, and social sciences. The book begins with the cryptographic algorithms of the Advanced Encryption Standard (AES) and Rivest, Shamir, and Adleman (RSA). It explains the mathematical reasoning behind public key cryptography and the properties of a cryptographic hash function before presenting the principles and examples of quantum cryptography. The text also describes the use of cryptographic primitives in the communication process, explains how a public key infrastructure can mitigate the problem of crypto-key distribution, and discusses the security problems of wireless network access. After examining past and present protection mechanisms in the global mobile telecommunication system, the book proposes a software engineering practice that prevents attacks and misuse of software. It then presents an evaluation method for ensuring security requirements of products and systems, covers methods and tools of digital forensics and computational forensics, and describes risk assessment as part of the larger activity of risk management. The final chapter focuses on information security from an organizational and people point of view. As our ways of communicating and doing business continue to shift, information security professionals must find answers to evolving issues. Offering a starting point for more advanced work in the field, this volume addresses various security and privacy problems and solutions related to the latest information and communication technology.

The 1880s were a critical time in Cameroon. A German warship arrived in the Douala estuary and proclaimed Cameroon a protectorate. At that time, two Swedes, Knutson and Waldau, were living on the upper slopes of the Cameroon Mountain. Very little is known about their activities. One, Knutson, wrote a long memoir of his time in Cameroon (1883-1895) which is published here for the first

time. It gives fascinating insights into everyday life in Cameroon and into the multifaceted relationships among the various Europeans, and between them and the Africans, at the end of the 19th century; we learn about the Swedes' quarrels first with the Germans and later with the British, over land purchases, thus revealing the origins of long on-going disputes over Bakweri lands. We are given vivid descriptions of Bakweri notables and their, and the Europeans', cultural practices, a rare eye-witness account of the sasswood witchcraft ordeal, and learn about Knutson's friendships with slaves. Together with appended contemporary correspondence, legal opinions, and early (translated) texts, this memoir must be considered as a unique and invaluable primary source for the pre-colonial history of Cameroon.

Initiate innovation and get things done with a guide to the process of academic change *Change Leadership in Higher Education* is a call to action, urging administrators in higher education to get proactive about change. The author applies positive and creative leadership principles to the issue of leading change in higher education, providing a much-needed blueprint for changing the way change happens, and how the system reacts. This book is a guide to being proactive about change in a way that ensures a healthy future for the institution, complete with models and tools that help lead the way. Readers will: Learn to lead change instead of simply "managing" it Examine different models of change, and redefine existing approaches Discover a blueprint for changing the process of change Analyze academic change through different lenses to gain a wider perspective Leading change involves some challenges, but this useful guide is a strong conceptual and pragmatic resource for forecasting those challenges, and going in prepared. The American people are frustrated with their government-dismayed by a series of high-profile failures (Iraq, Katrina, the financial meltdown) that seems to just keep getting longer. Yet our nation has a proud history of great achievements: victory in World War II, our national highway system, welfare reform, the moon landing. The year is 2112 and scientists are predicting that in twenty years or so an ice age will develop, that will, in all probability, be an extinction level event (ELE). Six scientists from various scientific fields come together and are able to build a spaceship that is capable of traveling faster than the speed of light. Using time travel, they go back to 2012 to try to convince people to change their ways and prevent this ELE from happening. Unfortunately, the people in that time period don’t believe them and the ice age is definitely coming. The six explorers search for an earth-like planet to which they can bring a number of people. They find a suitable planet more than two million light-years from earth. PROLOGUE One early April afternoon, in a Worcestershire field, the only field in that immediate landscape which was not down in grass, a man moved slowly athwart the furrows, sowing—a big man of heavy build, swinging his hairy brown arm with the grace of strength. He wore no coat or hat; a waistcoat, open over a blue-checked cotton shirt, flapped against belted corduroys that were somewhat the color of his square, pale-brown face and dusty hair. His eyes were sad, with the swimming yet fixed stare of epileptics; his mouth heavy-lipped, so that, but for the yearning eyes, the face would have been almost brutal. He looked as if he suffered from silence. The elm-trees bordering the field, though only just in leaf, showed dark against a white sky. A light wind blew, carrying already a scent from the earth and growth pushing up, for the year was early. The green Malvern hills rose in the west; and not far away, shrouded by trees, a long country house of weathered brick faced to the south. Save for the man sowing, and some rooks crossing from elm to elm, no life was visible in all the green land. And it was quiet—with a strange, a brooding tranquillity. The fields and hills seemed to mock the scars of road and ditch and furrow scraped on them, to mock at barriers of hedge and wall—between the green land and white sky was a conspiracy to disregard those small activities. So lonely was it, so plunged in a ground-bass of silence; so much too big and permanent for any figure of man.
